

CIRCULAR INNOVATION SOLUTION N-BUNKER WINS TOP PRIZE IN DIGICIRC BLUE ECONOMY TRACK

Navozyme is thrilled to announce that our cutting-edge solution, N-BUNKER, has been named the winner of the [DigiCirc Finals](#) - Blue Economy Track, which took place at the Deloitte office in Milan. The expert panel's recognition of N-BUNKER from the highly competitive field of DigiCirc open call winners is an incredible honor, and this achievement marks a significant milestone in N-BUNKER's journey to revolutionise bunkering globally.

Supported by the European Union's Horizon 2020 program, [DigiCirc](#) empowers circular innovation among small and medium-sized enterprises (SMEs) through tailored support and strategic partnerships, facilitating the transition to a circular economy in Europe. The Blue Economy track of DigiCirc focuses on digital solutions to enhance circularity and sustainability in ocean-related activities, with a particular emphasis on minimising resource usage and environmental impact throughout the product lifecycle.

[N-BUNKER](#) is the result of a collaboration between Navozyme and the Alfaship Group, utilising deeptech (AI & Blockchain) to streamline the bunkering process, minimise administrative burdens, and reduce the waiting time for bunkering at anchorage. By doing so, N-BUNKER eliminates wasteful fuel burn and enables decarbonisation.
