

## Turkey Tail/Wing Mount Instructions

- Note: These instructions are to be used as a general guide, proper taxidermy techniques should be followed in relation to skinning, fletching and drying.
- *Your turkey for will need to be dried/positioned as shown for this mount to work. (see pictures) please note the measurements and positioning of the toes.*
- Customers also inject the legs with "Preserves It" and Elmer's glue which keeps them from shriveling/shrinking up. This is only a suggestion, and Jake's Indiana Woodworking is not responsible for failed attempts at preserving your legs. Please use proper taxidermy practices to ensure quality results.
- *Once fully cured, your foot is simply placed into the bookend and using the supplied screw, screw into place by tightening the screw into the top of the leg bone.*
