

Red Alert

Syntocinon[®] is **concentrated synthetic oxytocin** in solution with other ingredients, supplied in ampoules containing **5 IU in 1 ml** or **10 IU in 1 ml** Syntocinon[®].

The concentrate must never be given by injection, intramuscularly, while the baby is still in the womb

because of very SEVERE RISKS:

to the baby: hypoxia, stillbirth;

to the mother: too severe pain, shock, myocardial ischaemia.

If injection repeated:

risk of ruptured womb, maternal death.
