

The ***Lightning View Aurora*** are MicroLed 4K DCI-HDR/HFR from 178" to 267" Direct View Screens, able to play Commercial DCPs in residential, yachting, hospitality, and corporate environments. The embedded ***Lightning View Core*** is a GDC SR-5520 Server with touchscreen UX & remote control.

## Specifications :

- |  |  |
|--|--|
| - 4096x2160 (4K) flat DCI, pitch 0.97mm, 1.22mm, 1.46mm  | - Weight (Kg) 4m:240 Kg, 5m:363 Kg, 6m:520 Kg                          |
| - Frame rate in 2D: 24, 25, 30, 48, 50, 60, 96, 120 fps  | - 100-240Vac, Power in SDR: 4m:520W, 5m:1200W, 6m:1530W                |
| - Frame rate in 3D: 24, 25, 30, 48, 50, 60 fps per eye   | - Power in HDR full white: 4m:1920W, 5m:2375W, 6m:3300W                |
| - DCI-P3 XYZ' color gamut, 281 billions colors           | - Screen depth: 46mm, except main cabinet with GDC: 166mm              |
| - Gray scale linearity RGB 48 bits, contrast >= 60.000:1 | - High quality alu. frame, <b>front service access for all modules</b> |
| - DCI luminance 48 nits (SDR), 150 nits, 300 nits (HDR)  | - Operating lifetime: 100 000 hours (11 years in 24x24-7x7)            |
| - GDC SR-5520 HDR-capable Server with 2/4TB CineCache    | - Warranty base 3 years, extension to 4, 5, 6, 7, 8, 9, 10 years       |
| - HDMI 2.1 input for content source in 4K up to 120 fps  | - 3% of free spare parts included with calibrated modules              |
| - Sizes (cm) 400 W x 211 H, 500 W x 264 H, 600 W x 316 H | - CTP 1.4, CE, CCC, ETL, EMC Class A, IEC 62368-1, PSE                 |

Available in DCI Day&Date Experiential Pack with DCP Library at Bel Air Cinema ([www.belaircinema.com](http://www.belaircinema.com))

# Lightning View Premium Audio Family

## Designed for integrators. Built for customisation.

High-end residential projects demand true customisation, but fixed-format front-wall solutions add complexity, cost, and longer project cycles. Ambiance & Aurelys provides building-block platform that lets integrators design around the exact screen size, wall geometry, and performance target, all this without compromising the architectural result.

### ARCHITECTURAL SCREEN INTEGRATION

Screen-framing concept with clean alignment.

### MODULAR + SCALABLE

Build to fit screen size, layout and performance targets.

### CUSTOM FINISHES

Choice 30 Fabric colours + 2 plate options for a refined result.

## Two dedicated Product Lines

### Theater Line, for dedicated cinemas and large rooms (620x540 mm)

The Theater Line is built for projects where output, scale, and headroom come first. It's the go-to range for dedicated cinemas and larger installations—designed to integrate into custom fit-outs while keeping the system architecture clean and professional.

### SonicFrame Line, slim architectural speakers for *Lightning View* screens' integration (540x340 mm or 340x236 mm)

**SonicFrame** is designed for clean, modern screen installations—fitting around *Lightning View* screens on walls or in compact dedicated theaters. Its slim depth and modular cabinet formats make it easy to adapt to the project's screen layout while keeping a refined, architectural result.

CINEMA

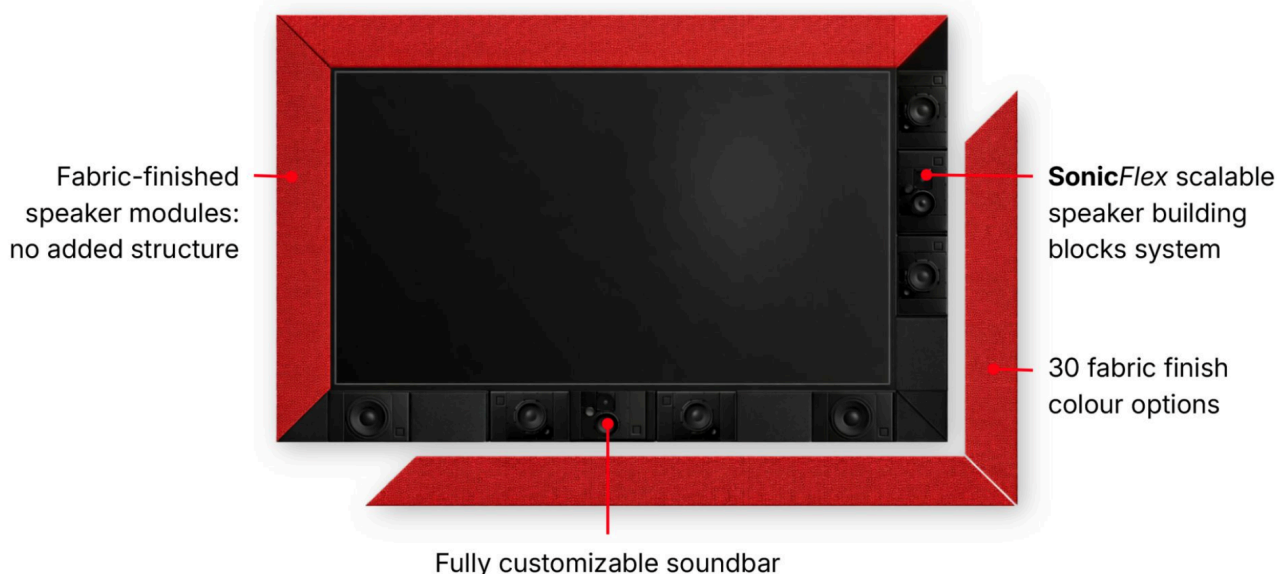

## SonicFrame Configurations

**SonicFrame™** is available in four configuration families, each designed to let integrators build around the screen, wall geometry, and performance target while maintaining clean alignment and a refined architectural result.

### Modular screen integration for high-performance home cinema

### Full Frame

Full frame configurations deliver maximum architectural integration: a unified screen-framing concept with integrated speaker modules for a clean, seamless finish. Typical builds feature an LCR soundbar across the bottom with optional side channels, then scale with additional bass support as required

### Side Bars

Side sound bars configuration focuses on vertical integration for screen-first alignment and a clean perimeter concept, ideal when the bottom area must remain clear. Configurations typically use left/right arrays for the main channels (and optional wides), paired with a separate centre/bottom solution when needed.

AMBIANCE  
CINEMA

.....

## Bottom SoundBar

Creates a continuous soundbar under the screen, assembled on-site to the required length for a perfect fit. Integrators can specify LCR soundbar layouts with scalable bass support, extending the total length using filler modules cut to match the exact dimension.

.....

## 3 Speaker combo

This configuration combines side modules with a bottom soundbar for projects that demand a stronger front-stage and symmetrical screen integration. Typical configurations pair an LCR soundbar with left/right side arrays (and optional additional channels), then scale bass according to the room and target performance.

---

**Dedicated to Cinema.**  
**Dedicated to Music.**  
**Dual-mode native.**

Cinema and Music are different sound experiences, and many systems end up optimized for one destination.

**DualMode is Aurelys' Multi-Sonic Modes technology for integrated speaker systems:** select **Cinema**, **Music**, or **Classic (balanced all-round tuning)** within one platform, without external converters or complex switching workflows !

### CINEMA MODE

Stability, headroom, and controlled dynamics at high playback levels—switch signatures in one system without added complexity.

### MUSIC MODE

Finesse, nuance, and a refined listening signature—switch signatures in one system without added complexity.

### CLASSIC MODE

Classic (balanced all-round tuning) for mixed use—switch signatures in one system without added complexity.

---

**DualMode Ciné-Music** technology is available across the range, including Dual Ciné-Music 8/8-C, Dual LCR 6 H+V, and Dual Satellites 6 H+V & 5 H+V.

AMBIANCE  
CINEMA

# What makes SonicFlex “flexible”

SonicFlex supports Multi-Sonic Modes so the system can match the intended experience of the room.

### BUILDING BLOCKS

Cinema and on-wall modules work as building blocks, so systems can be built around screens, walls, and layouts with real design freedom.

### APPLICATION

Select the configuration for the environment: living spaces, home entertainment and media rooms, or dedicated home cinema.

### SIZE

Scale the platform with room volume, screen size, SPL targets, and aesthetic constraints—from refined media rooms to full dedicated cinemas.

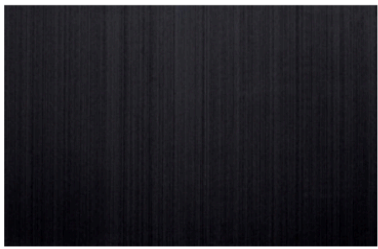

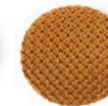

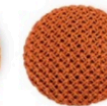

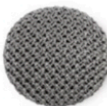

### POWER

Scale headroom and listening distance by pairing the loudspeaker building blocks with supporting electronics (amplification/DSP + sound processing) to keep the system coherent from specification to tuning.

Assemble modules on-site **to any length**, with **factory-cut fillers for a perfect fit**.  
Compose the system around the screen, wall geometry, and performance target, while keeping clean alignment and a refined architectural result, project after project.
