# TESTING SEASON IS ALMOST HERE.

## HOW READY ARE YOUR STUDENTS?

**As teachers and students enter the final stretch before high-stakes testing, instructional decisions matter more than ever.**

Increased pacing, harder problems, interventions, or more practice rarely produce meaningful gains...Why?

Because **Mastery** is the goal and many teachers often plan without a shared, concrete understanding of what Mastery looks like in student thinking and student work.

### Our Math L&D Sessions Change That

The T.E.A.C.H! Mastery learning and development sessions equip educators to use **Achievement Level Descriptors (ALDs)** as instructional compasses to develop plans for growing all students to Mastery.

In our full day Mastery focused Knowledge Building Session...

#### Teachers learn how to:

- Analyze ALDs to identify the criteria and skills required for the various levels of academic performance
- Clarify what Mastery of a standard looks like and what it requires
- Identify where different achievement levels live inside math tasks and lessons
- Diagnose gaps in rigor
- Make targeted instructional adjustments that increase student access to Mastery-level thinking and strengthen skills without overhauling curriculum
- And more!

**Teachers leave with clear instructional pathways for supporting student progress toward Mastery-Level Performance.**

If your district or network needs Mastery-specific teaching strategies that translate directly to classroom practice and student outcomes, click the link below to schedule your free 30-minute consultation.
