

# NX Chemical

Chemicals | Materials | Systems

Most processing plants face a number of different challenges every day, and choosing the correct solution can be difficult. Increased reliability and profitability with lower operational costs are among the key factors all operations are striving for. NX Chemical develops chemical additive, materials and integrated solutions for the process industry worldwide with the objective of positively impacting overall productivity.

NX Chemical also provides a number of integrated capabilities such as engineered solutions, consulting, onsite support, laboratory analysis, sensors, analyzers and chemical injection skids.

NX chemical technologies include:

- **Emulsion Breakers & Antifoams**  
Amine Units, TEG Units, Separators, Produced Water, Hydrocarbon Treating and Desalters
- **Specialized Coatings**  
Metal, Concrete, Plastic, Fabrics, Wood, Marine, Graffiti
- **Corrosion Inhibitors**  
Amine Units and TEG Units
- **H<sub>2</sub>S & Mercaptans Scavengers (sulfur removal)**  
Crude Oil, NGL, Condensates, LPG and LNG
- **Antifoulants & Scale Inhibitors (solid deposit removal)**  
Iron Sulfide, Calcium Carbonate and Polymers
- **Cleaning Agents (oil removal)**  
Hydrocarbon removal for surfaces, garments and equipment
- **Bioremediation Products (spill control)**  
Remediation of oil spills in soil and water
- **Activated Carbon, Silica Gel & Alumina (solid adsorbents for soluble contaminant removal)**  
Soluble contaminant removal and purification gas and liquid streams
