MODEL LDM4LSP2
PROCESS & TEMPERATURE METER
Instruction Manual

- Accepts Current, Voltage, TC, & RTD Inputs
- 4 Digit Display, 0.56" (14 mm) or 1.20" (31 mm)
- Linear or Square Root with Low-Flow Cutoff
- Operating temperature range of between -40°C and 65°C
- Maximum/Minimum Display
- Type 4X, NEMA 4X, IP65 Front
- Universal Power Supply 85-265 VAC
- Two Relays
- 24 VDC Transmitter Power Supply Options
- Free Modbus® RTU Protocol
- Copy Meter Settings to Other Meters
- Free MeterView Software - Configuration & Data Acquisition

INTRODUCTION

This is a multipurpose, easy to use digital meter. It accepts current, voltage, thermocouple, and RTD signals. The four front panel buttons make the setup and programming an easy task.

The isolated 24 VDC transmitter power can be used to power the input transmitter or other devices.

The two relays can be used for alarm indication or process control applications, such as pump alternation control.

Table of Contents

Table of Figures

SPECIFICATIONS

Except where noted all specifications apply to operation at +25°C.

General

DISPLAY	1.20" (31 mm), Four digits (-1999 to 9999), automatic lead zero blanking.
DISPLAY INTENSITY	Eight intensity levels
DISPLAY UPDATE RATE	Process/RTD: 3.7-5/second Thermocouple: 1.8-2.5/second
OVERRANGE	Display flashes 9999
UNDERRANGE	Display flashes -1999
PROGRAMMING METHODS	Four front panel buttons, PC and MeterView software, or cloning using Copy function
NOISE FILTER	Programmable from 2 to 199 (0 will disable filter)
RECALIBRATION	All ranges are calibrated at the factory. Recalibration is recommended at least every 12 months.
MAX/MIN DISPLAY	Max/min readings reached by the process are stored until reset by the user or until power to the meter is turned off.
PASSWORD	Programmable password restricts modification of settings.
NON-VOLATILE MEMORY	All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost.
POWER OPTIONS	85-265 VAC, 50/60 Hz 90-265 VDC, 20 W max or 12-36 VDC, 12-24 VAC, 6 W max See table for power consumption (*X: number depends on option)
FUSE	Required fuse: UL Recognized, 5 A max, slow blow Up to 6 meters may share one 5 A fuse
ISOLATED TRANSMITTER POWER SUPPLY	24 VDC $\pm$ 10% @ 200 mA max. (-1 option)
NORMAL MODE REJECTION	64 dB at 50/60 Hz
ISOLATION	4 kV input/output-to-power line 500 V input-to-output or output-to-P1/P2 supplies -6R5 & -6X5 models only: 100 V output-to-24 VDC supply
OVERVOLTAGE CATEGORY	Installation Overvoltage Category II: Local level with smaller transient overvoltages than Installation Overvoltage Category III.

ENVIRONMENTAL	Operating temperature range: -40 to 65°C Storage temperature range: -40 to 85°C Relative humidity: 0 to 90% non-condensing
CONNECTIONS	Removable screw terminal blocks accept 12 to 22 AWG wire, RJ11 for serial communication adapters
ENCLOSURE	1/8 DIN, high impact plastic, UL 94V-0, color: gray
MOUNTING	1/8 DIN panel cutout required. Two panel mounting bracket assemblies provided
TIGHTENING TORQUE	Screw terminal connectors: 5 lb-in (0.56 Nm)
OVERALL DIMENSIONS	2.45" x 4.68" x 4.19" (62 mm x 119 mm x 106 mm) (H x W x D)
WEIGHT	9.5 oz. (269 g) (including options)
WARRANTY	3 years parts & labor

Process Input

INPUTS	Field selectable: ±20 mADC (0-20, 4-20 mA) and ±10 VDC (0-5, 1-5, 0-10 V)	
ACCURACY	±0.05% of span ±1 count, square root: 10-100% FS	
FUNCTION	Linear or square root	
LOW-FLOW CUTOFF	0-9999 (0 disables cutoff function)	
TEMPERATURE DRIFT	**0 to 65°C ambient**	**-40 to 0°C ambient**
	Current: ±0.20% FS (50 PPM/°C) **Voltage:** ±0.02% FS (1.7 PPM/°C)	**Current:** ±0.80% FS **Voltage:** ±0.06% FS
DECIMAL POINT	Up to three decimal places for process inputs: *d.ddd*, *dd.dd*, *ddd.d*, or *dddd*	
CALIBRATION RANGE	An *Error* message will appear if input 1 and input 2 signals are too close together.	
	Input Range **Minimum Span** **Input 1 & Input 2** 4-20 mA 0.40 mA ±10 V 0.20 V	
INPUT IMPEDANCE	Voltage ranges: greater than 1 MΩ Current ranges: 50 - 100 Ω (depending on resettable fuse impedance)	
INPUT OVERLOAD	Current input protected by resettable fuse. Fuse resets automatically after fault is removed.	

Temperature Inputs

INPUTS	Field selectable: type J, K, T, or E thermocouples; 100 Ω platinum RTD (0.00385 or 0.00392 curve)
RESOLUTION	1° or 0.1° for all RTD inputs. 1° for all thermocouples. 1° or 0.1° for Type T thermocouple

ACCURACY

Input Type	Range	Accuracy (0 - 65 C)	Accuracy (-40 - 0 C)
Type J	-58° to 1382° F -50° to 750°C	±2°F ±1°C	±5°F ±3°C
Type K	-58° to 2300° F -50° to 1260°C	±2°F ±1°C	±4°F ±2°C
Type T	-292° to 700° F -180° to 371°C	±2°F ±1°C	±13°F ±7°C
Type T 0.1° Res	-199.9° to 700.0° F -180.0° to 371.0°C	±1.8°F ±1.0°C	±13°F ±7.2°C
Type E	-58° to 1578° F -50° to 870°C	±2°F ±1°C	±11°F ±6°C
100 Ω RTD	-328° to 1382°F -200° to 750°C	±1°F ±1°C	±5°F ±3°C

COLD JUNCTION REFERENCE	Automatic, fixed, no user calibration needed
OFFSET ADJUSTMENT	Programmable to ±19.9°. This parameter allows the user to apply an offset value to the temperature being displayed.
INPUT IMPEDANCE	Greater than 100 kΩ
SENSOR BREAK DETECTION	Open TC or RTD sensor indicated by display flashing **oPEn**. All relays and alarm status LEDs go to alarm or non-alarm state, programmable for each relay individually. Analog output goes to the programmed sensor break value.

Relays Option

RATING	2 SPDT (Form C); rated 3 A @ 30 VDC or 3 A @ 250 VAC resistive load; 1/14 HP @ 125/250 VAC (50 watts) for inductive loads
ELECTRICAL NOISE SUPPRESSION	A suppressor (snubber) should be connected to each relay contact switching inductive loads to prevent disruption to the microprocessor's operation. Recommended suppressor value: 0.01 µF/470 Ω, 250 VAC (PDX6901).
DEADBAND	0-100% of full scale, user selectable
HIGH OR LOW ALARM	User may program any alarm for high or low trip point.
RELAY OPERATION	Automatic (non-latching) Latching Pump alternation control
RELAY RESET	User selectable via front panel buttons or PC
	Automatic reset only (non-latching)
	Automatic + manual reset at any time (non-latching)
	Manual reset only, at any time (latching)
	Manual reset only after alarm condition has cleared (latching)
	Automatic reset: Relays will automatically reset when the input passes the reset point.
	Manual reset: Front panel ACK button. Pressing ACK resets all manually resettable relays.
TIME DELAY	0 to 199 seconds, on and off delays Programmable and independent for each relay
FAIL-SAFE OPERATION	Programmable Independent for each relay
AUTO INITIALIZATION	When power is applied to the meter, relays will reflect the state of the input to the meter.

Fail-safe operation: relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Serial Communications

METER ADDRESS	PDC protocol: 0 - 99 Modbus protocol: 1 - 247
BAUD RATE	300 – 19,200 bps
TRANSMIT TIME DELAY	Programmable between 0 and 199 ms
DATA	8 bit (1 start bit, 1 stop bit)
PARITY	None (1 or 2 stop bits), even, or odd (Modbus only; PDC protocol does not use parity)
BYTE-TO-BYTE TIMEOUT	0.01 – 2.54 sec (Modbus only)
TURN AROUND DELAY	Less than 2 ms (fixed)

COMPLIANCE INFORMATION

Safety

UL LISTED	USA and Canada UL 508 Industrial Control Equipment
UL FILE NUMBER	E160849
FRONT PANEL	UL Type 4X, NEMA 4X, IP65; panel gasket provided
LOW VOLTAGE DIRECTIVE	EN 61010-1:2010 Safety requirements for measurement, control, and laboratory use

Electromagnetic Compatibility

EMISSIONS	EN 55011:2009 + A1:2010 Group 1 Class A ISM emissions requirements
Radiated Emissions	Class A
AC Mains Conducted Emissions	Class A
IMMUNITY	EN 61326-1:2013 Measurement, control, and laboratory equipment EN 61000-6-2:2005 EMC heavy industrial generic immunity standard
RFI - Amplitude Modulated	80 -1000 MHz 10 V/m 80% AM (1 kHz) 1.4 - 2.0 GHz 3 V/m 80% AM (1 kHz) 2.0 - 2.7 GHz 1 V/m 80% AM (1 kHz)
Electrical Fast Transients	±2kV AC mains, ±1kV other
Electrostatic Discharge	±4kV contact, ±8kV air
RFI - Conducted	10V, 0.15-80 MHz, 1kHz 80% AM
AC Surge	±2kV Common, ±1kV Differential
Surge	1KV (CM)
Power-Frequency Magnetic Field	30 A/m 70%V for 0.5 period
Voltage Dips	40%V for 5 & 50 periods 70%V for 25 periods
Voltage Interruptions	<5%V for 250 periods

Note:

Testing was conducted on meters installed through the covers of grounded metal enclosures with cable shields grounded at the point of entry representing installations designed to optimize EMC performance.

Declaration of Conformity available at www.lumenite.com

SAFETY INFORMATION

CAUTION: Read complete instructions prior to installation and operation of the meter.

WARNING: Risk of electric shock.

WARNING
Hazardous voltages exist within enclosure. Installation and service should be performed only by trained service personnel.

INSTALLATION

There is no need to remove the meter from its case to complete the installation, wiring, and setup of the meter.

Unpacking

Remove the meter from box. Inspect the packaging and contents for damage. Report damages, if any, to the carrier.

If any part is missing or the meter malfunctions, please contact your supplier or the factory for assistance.

Panel Mounting

- Prepare a standard 1/8 DIN panel cutout – 3.622" x 1.772" (92 mm x 45 mm). Refer to *MOUNTING DIMENSIONS*, page 63 for more details.

- Clearance: allow at least 4" (102 mm) behind the panel for wiring.

- Panel thickness: 0.04" - 0.25" (1.0 mm - 6.4 mm). Recommended minimum panel thickness to maintain Type 4X rating: 0.06" (1.5 mm) steel panel, 0.16" (4.1 mm) plastic panel.

- Remove the two mounting brackets provided with the meter (back-off the two screws so that there is ¼" (6.4 mm) or less through the bracket. Slide the bracket toward the front of the case and remove).

- Insert meter into the panel cutout.

- Install mounting brackets and tighten the screws against the panel. To achieve a proper seal, tighten the mounting bracket screws evenly until meter is snug to the panel along its short side. DO NOT OVER TIGHTEN, as the rear of the panel may be damaged.
Figure 1. Panel Cutout and Mounting

Connections

All connections are made to removable screw terminal connectors located at the rear of the meter.

> ⚠ Use copper wire with 60°C or 60/75°C insulation for all line voltage connections. Observe all safety regulations. Electrical wiring should be performed in accordance with all applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.

Connector Labeling

The connectors label, affixed to the meter, shows the location of all connectors available with requested configuration. It also identifies the location of the RTD/TC selector switch. The below two images are common connector configurations for the LDM4LSP2 meter. Note that the connector in the upper left of the diagram has two different configurations based on the model.
Figure 2. Labeling for 2 Relay, Analog Out, & 24 V Supply Model
Figure 3. Labeling for Analog Out & Two 24 V Supply Model

Power Connections

Power connections are made to a two-terminal connector labeled POWER on Figure 2. The meter will operate regardless of DC polarity connection. The + and - symbols are only a suggested wiring convention.

POWER CONNECTOR

Required External Fuse:
5 A max, Slow Blow
Figure 4. Power Connections

Signal Connections

Signal connections are made to a five-terminal connector labeled SIGNAL on Figure 2. The COM (common) terminal is the return for all types of input signals.

Current and Voltage Connections

The following figures show examples for current and voltage connections.

There are no switches or jumpers to set up for current and voltage inputs. Setup and programming is performed through the front panel buttons.
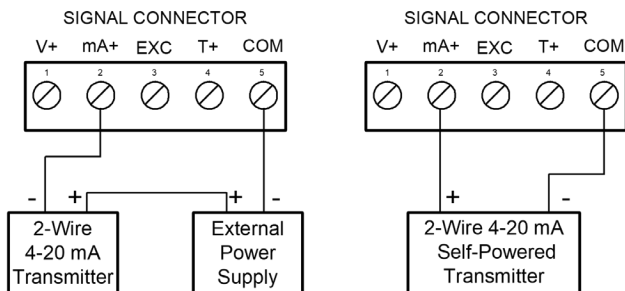

Figure 5. Transmitter Powered by Ext. Supply or Self-Powered
Figure 6. Transmitters Powered by Internal Supply (Optional)

The current input is protected against current overload by a resettable fuse. The display may or may not show a fault condition depending on the nature of the overload.

The fuse limits the current to a safe level when it detects a fault condition, and automatically resets itself when the fault condition is removed.
Figure 7. Voltage Input Connections

The meter is capable of accepting any voltage from -10 VDC to +10 VDC.

Thermocouple and RTD Connections

The following figures show examples for thermocouple and RTD connections.

The RTD/TC selector switch must be set to the proper position for the meter to accept the selected temperature input.

The input type is selected using the *Setup* menu.

Selected thermocouple input must correspond to thermocouple sensor and wire type used.
Figure 8. Thermocouple Input Connections
Figure 9. Three-Wire RTD Input Connections

The meter accepts two, three, or four-wire RTDs. The three-wire RTD connection has built-in lead wire compensation.
Figure 10. Two-Wire RTD Input Connections

Lead wire compensation for two-wire RTDs can be applied using the *Adjust* menu. See Offset Adjustment (*Adj*), page 52.
Figure 11. Four-Wire RTD Input Connections

The four-wire RTD connection is similar to the three-wire. One of the leads of a four-wire RTD is not connected, and may be clipped off.

The three-wire connection provides sufficient lead wire compensation to provide accurate readings even with long leads.

Serial Communication

Serial communication connection is made to an RJ11 connector labeled SERIAL on Figure 2.

Relays and 24 V Output Connections

Relay connections are made to a six-terminal connector labeled RELAY1, RELAY2 on Figure 2. The COM (common) terminals of the relays should not be confused with the COM (common) terminal of the SIGNAL connector. The 24 VDC output is available at the connector labeled 24V OUT, next to the relays connector.
Figure 12. Relay & 24 V Output Connections

Switching Inductive Loads

The use of suppressors (snubbers) is strongly recommended when switching inductive loads to prevent disrupting the microprocessor's operation. The suppressors also prolong the life of the relay contacts. Suppression can be obtained with resistor-capacitor (RC) networks assembled by the user or purchased as complete assemblies. Refer to the following circuits for RC network assembly and installation:
Figure 13. AC and DC Loads Protection

Choose R and C as follows:

R: 0.5 to 1 Ω for each volt across the contacts
C: 0.5 to 1 µF for each amp through closed contacts
Notes:
1. Inductive relay rating is 1/14 HP (50 W) at 115/230 VAC
2. Use capacitors rated for 250 VAC.
3. RC networks may affect load release time of solenoid loads. Check to confirm proper operation.
4. Install the RC network at the meter's relay screw terminals. An RC network may also be installed across the load. Experiment for best results.

Use a diode with a reverse breakdown voltage two to three times the circuit voltage and forward current at least as large as the load current.
Figure 14. Low Voltage DC Loads Protection

Note: Relays are de-rated to 1/14th HP (50 watts) with an inductive load.

SETUP AND PROGRAMMING

Programming From a PC with MeterView

MeterView software allows all LDM4LSP2 setup parameters to be programmed from a PC (requires PDC protocol selection) and to save the configuration settings to a file for reporting or programming other meters. And since the serial adapter is an external device, one serial adapter can program an infinite number of meters!
The MeterView screen shot above shows how the input is selected. Notice there are tabs for Scaling, Relays/Alarms, Advanced, and Factory Values.

- There is **no need to recalibrate** the meter when first received from the factory.
- The meter is ***factory calibrated*** prior to shipment, for all input types, in milliamps, volts, and degrees respectively. The calibration equipment is certified to NIST standards.

Overview

There are no jumpers involved in the setup process of the meter. The RTD/TC selector switch, located between the SIGNAL and SERIAL connectors, must be set accordingly for the meter to accept RTD or thermocouple inputs, Figure 2.

Setup and programming is done through the front panel buttons.

After power and signal connections have been completed and verified, apply power to the meter.

For
QUICK INTERFACE REFERENCE GUIDE go to page 69

Front Panel Buttons and Status LED Indicators
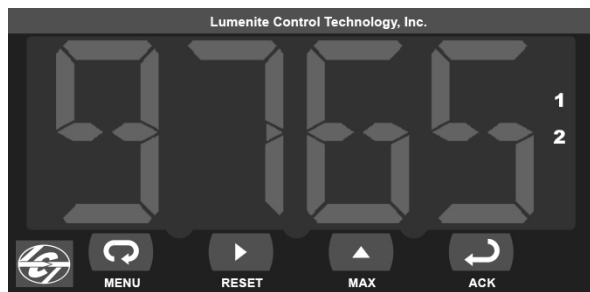

Button Symbol	Description
↻	**Menu**
▶	**Right arrow/Reset**
▲	**Up arrow/Max**
↵	**Enter/Ack**

LED	Status
1	Alarm 1
2	Alarm 2

- Press the **Menu** button to enter or exit the Programming Mode at any time.
- Press the **Right** arrow button to move to the next digit during digit programming.
- Press the **Up** arrow button to scroll through the menus, decimal point, or to increment the value of a digit.
- Press the **Enter/Ack** button to access a menu or to accept a setting.
- Press the **Right** arrow and **Menu** button simultaneously or hold the **Menu** button for approximately 3 seconds to access the *Advanced Features Menu* of the meter.

Display Functions and Messages

The meter displays various functions and messages during setup/pro-gramming and operation. The following table shows the displayed func-tions and messages with their action/setting description.

Display	Parameter	Action/Setting
5Etu	*Setup*	Enter *Setup* menu
ınPt	*Input*	Enter *Input* menu
4-20	*4-20 mA*	Set meter for 4-20 mA input
0-10	*0-10 VDC*	Set meter for ±10 VDC input
rtd	*RTD*	Set meter for RTD input
A385	*Alpha 385*	Set α = 0.00385 European curve 100Ω RTD
A392	*Alpha 392*	Set α = 0.00392 American curve 100Ω RTD
tC	*TC*	Set meter for TC input
0 J	*0 J*	Type J
1 H	*1 K*	Type K
2 t	*2 T*	Type T
3 t.0	*3 T.0*	Type T, 0.1° resolution
4 E	*4 E*	Type E
F C	*℉ or ℃*	Set temperature scale
°F	*℉*	Set meter to Fahrenheit
°C	*℃*	Set meter to Celsius
dEc.P	*Decimal point*	Set decimal point
ProG	*Program*	Enter the *Program* menu
5cAL	*Scale*	Enter the *Scale* menu
CAL	*Calibrate*	Enter the *Calibrate* menu
ınP1	*Input 1*	Calibrate input 1 signal or program input 1 value
dıS1	*Display 1*	Program display 1 value
ınP2	*Input 2*	Calibrate input 2 signal or program input 2 value

Display	Parameter	Action/Setting
d ı52	*Display 2*	Program display 2 value
Err	*Error*	Error, calibration not successful, check signal
rELY	*Relay*	Enter the *Relay* menu
rLY1	*Relay 1*	Relay 1 setup
Act1	*Action 1*	Set relay 1 action (automatic, latching, etc.)
Auto	*Automatic*	Set relay for automatic reset
A-nⁿ	*Auto-manual*	Set relay for automatic + manual reset any time
LtCH	*Latching*	Set relay for latching operation
L-CL	*Latching-cleared*	Set relay for latching operation with manual reset only after alarm condition has cleared
ALtr	*Alternate*	Set relays for pump alternation control
oFF	*Off*	Disable relay and front panel status LEDs Disable relay's fail-safe operation
SEt1	*Set 1*	Program set point 1
rSt1	*Reset 1*	Program reset point 1
rLY2	*Relay 2*	Setup relay 2
Act2	*Action 2*	Set relay 2 action (automatic, latching, etc.)
SEt2	*Set 2*	Program set point 2
rSt2	*Reset 2*	Program reset point 2
FLSF	*Fail-safe*	Enter *Fail-safe* menu
FLS1	*Fail-safe1*	Set relay 1 fail-safe operation
on	*On*	Enable fail-safe operation
oFF	*Off*	Disable fail-safe operation
FLS2	*Fail-safe2*	Set relay 2 fail-safe operation
dLAY	*Delay*	Enter *Time Delay* menu
dLY1	*Delay 1*	Enter relay 1 time delay setup
On1	*On 1*	Set relay 1 On time delay
OFF1	*Off 1*	Set relay 1 Off time delay
dLY2	*Delay 2*	Enter relay 2 time delay setup

Display	Parameter	Action/Setting
On2	*On 2*	Set relay 2 On time delay
OFF2	*Off 2*	Set relay 2 Off time delay
brEH	*Break*	Set RTD/TC input break relay behavior
brH 1	*Relay 1 Break*	Set relay 1 input break relay behavior
OFF	*Off*	Set relay to non-alarm condition at break
On	*On*	Set relay to alarm condition at break
brH2	*Relay 2 Break*	Set relay 2 input break relay behavior
Rout	*Analog output*	Enter the *Analog output* menu
ScRL	*Scale*	Enter the Scale menu
d i5 1	*Display 1*	Program display 1 value
out 1	*Output 1*	Program output 1 value (e.g. 4 mA)
d i52	*Display 2*	Program display 2 value
out2	*Output 2*	Program output 2 value (e.g. 20 mA)
SEbr	*Sensor break*	Program TC or RTD sensor break value for analog out
PRSS	*Password*	Enter the *Password* menu
unLC	*Unlocked*	Program password to lock meter
LoCd	*Locked*	Enter password to unlock meter
9999 *- 1999* *oPEn*	*Flashing display*	Overrange condition Underrange condition Open TC or RTD sensor

Main Menu

The main menu consists of the most commonly used functions: *Setup* and *Password*.

• Press **Menu** button to enter Programming Mode then press **Up** arrow button to scroll main menu.
• Press **Menu**, at any time, to exit and return to Run Mode. Changes made to settings prior to pressing **Enter/Ack** are not saved.
• Changes to the settings are saved to memory only after pressing **Enter/Ack**.
• The display moves to the next menu every time a setting is accepted by pressing **Enter/Ack**.

Setting Numeric Values

The numeric values are set using the **Right** and **Up** arrow buttons.
Press **Right** arrow to select next digit and **Up** arrow to increment digit value.
The digit being changed is displayed brighter than the rest.
Press the **Enter/Ack** button, at any time, to accept a setting or **Menu** button to exit without saving changes.
The decimal point is set using the **Up** arrow button in the *Setup-decimal point* menu.

Setting Up the Meter (SEtu)

The *Setup* menu is used to select:

1. Input signal the meter will accept
2. Decimal point position for process inputs
3. Units (°F or °C) for temperature inputs
4. Relay operation
5. 4-20 mA analog output set up

Press the **Enter/Ack** button to access any menu or press **Up** arrow button to scroll through choices. Press the **Menu** button to exit at any time.
Note:
Selecting RTD or TC mode from the Input menu will include the Fahrenheit/Celsius menu in the setup menu structure. RTD will allow the selection of a decimal point location after this menu and TC has a fixed decimal point location and will not allow the selection of a decimal point location.

* Relay menu is always available even if relays option is not installed. Visual alarm indication is available through front panel LEDs and MeterView software.

** Analog Output menu is available if selected in the Advanced Features menu. 4-20 mA output option board is installed and set up at the factory.

28

Setting the Input Signal (ɪnPᵗ)

Enter the *Input* menu to set up the meter to display current (4-20), voltage (0- 10), thermocouple (ᵗC), or RTD (rᵗd) inputs.

The voltage input is capable of accepting any signal from -10 to +10 VDC. Select voltage input to accept 0-5, 1-5, 0-10, or ±10 VDC signals.

The current input is capable of accepting any signal from -20 to 20 mA. Select current input to accept 0-20 or 4-20 mA signals.

Press Enter/Ack to
Make Selections

Press Up Arrow
to Scroll Through
Choices

Press Menu to
Exit at any Time
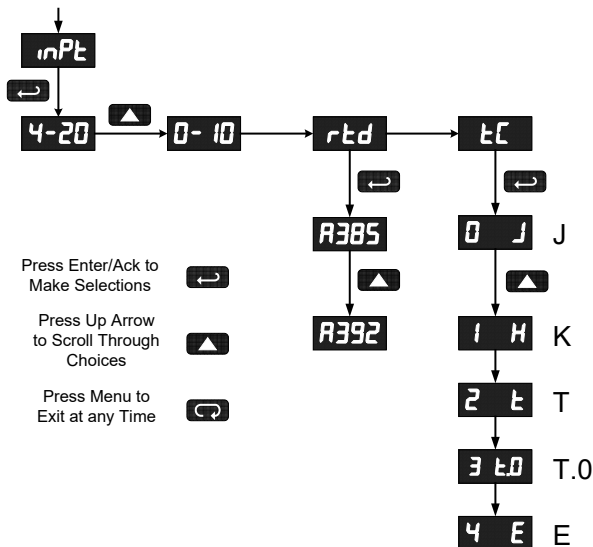

If RTD is selected, the display shows **A385** or **A392**. Select the coefficient to match the RTD sensor, either 0.00385 (**A385**, European curve) or 0.00392 (**A392**, American curve). The display then shows the decimal point menu, **DEc.P**. Select the decimal point resolution as shown on page 30.

If TC is selected, scroll through the thermocouple types and select the type matching the TC sensor.

The input signal must be connected to the appropriate input terminals and the RTD/TC selector switch must be set, see Figure 8 on page 18.

For thermocouple inputs, allow at least 30 minutes warm-up time for meter to reach specified accuracy.

Setting the Decimal Point (dEc.PE)

Decimal point for process inputs may be set with up to three decimal places or with no decimal point at all.

Decimal point for RTD inputs may be set with 1 decimal place or none.

Decimal point for thermocouple inputs is fixed.

Pressing the **Up** arrow moves the decimal point one place to the right until no decimal point is displayed, it then moves to the leftmost position.
Setting the Temperature Scale (F   C)

The meter can be set to display temperature in degrees Fahrenheit or Celsius.

Press **Up** arrow to change selection.

Press **Enter/Ack** to accept.
Programming the Meter (prog)

It is **very important** to read the following information, before proceeding to program the meter:

- There is **no need to recalibrate** the meter when first received from the factory.

- The meter is *factory calibrated* prior to shipment, for all input types, in milliamps, volts, and degrees respectively. The calibration equipment is certified to NIST standards.

- Use the *Scale* menu to scale process inputs (e.g. 4-20 mA). A calibrated signal source is not needed to scale the meter.

- For thermocouple and RTDs, just connect the sensor to the proper terminals and turn the power on. *No calibration needed!* (when the meter is first received from the factory).

The *Program* menu contains the *Calibrate* and the *Scale* menus.

Process inputs may be calibrated or scaled to any display within the range of the meter.
Additional parameters, not needed for most applications, are programmed with the *Advanced Features* menu, see *Advanced Features Menu*, page 49.

Scaling the Meter (ScAL)

The process inputs (4-20 mA and ±10 VDC) can be scaled to display the process in engineering units.

A signal source is not needed to scale the meter; simply program the inputs and corresponding display values.

Press Enter to Accept Setting

Press Up to Set Digit Value

Press Right to Select Next Digit

Press Menu to Exit at any Time

Set Input 1 Value

Set Display 1 Value
Scale Input 2

For instructions on how to program numeric values see *Setting Numeric Values*, page 27.

Note:

The *Scale* menu is not available for temperature inputs.

Error Message (Err)

An error message indicates that the calibration or scaling process was not successful.

After the error message is displayed, the meter reverts to input 1, allowing the appropriate input signals to be applied.

The error message might be caused by any of the following conditions:

1. Input signal is not connected to the proper terminals or it is connected backwards.
2. Wrong signal selection in *Setup* menu.
3. Minimum input span requirements not maintained.
4. Input 1 signal inadvertently applied to calibrate input 2.

Minimum Input Span

The minimum input span is the minimum difference between input 1 and input 2 signals required to complete the calibration or scaling of the meter.

Input range	Input 1 & input 2 span
4-20 mA	0.40 mA
±10 VDC	0.20 VDC
TC	100°F (56°C)
RTD	50°F (28°C)

Calibrating the Meter (*CAL*)

> To scale the meter without a signal
> source, refer to Scaling the Meter
> (*ScAL*), page 32.

The meter can be calibrated to display the process in engineering units
by applying the appropriate input signal and following the calibration
procedure.

The use of a calibrated signal source is strongly recommended to cali-
brate the meter.

See *Scaling the Meter* for Button
Functions Description

Recalibrating Temperature Inputs (*CAL*)

Remember, the meter is **calibrated** at the factory prior to shipment. Re-
calibration is recommended at least every twelve months.

The *Calibration* (*CAL*) menu is used to **recalibrate** the thermocouple and
RTD inputs.

> *Allow at least 30 minutes warm-up time
> before performing recalibration proce-
> dure to ensure specified accuracy.*

Recommended Calibration Points

To recalibrate the meter, it is recommended to use the Fahrenheit scale; this will give a greater degree of accuracy to the calibration. The scale can be changed to the Celsius scale after calibration is completed. The meter will display temperature accurately in any scale. The following table shows the recommended low and high calibration points for all types.

Type of input	Input 1 (Low)	Input 2 (High)	Check (Middle)
Type J T/C	32°F	1182°F	600°F
Type K T/C	32°F	1893°F	960°F
Type T T/C	32°F	693°F	360°F
Type T T/C	32.0°F	693.0°F	360.0°F
Type E T/C	32°F	1652°F	840°F
100 Ω RTD (0.00385)	32°F 100Ω	1148°F 320.12Ω	590°F 215.61Ω
100 Ω RTD (0.00392)	32°F 100Ω	1127°F 320.89Ω	580°F 215.87Ω

Recalibration Procedure for Temperature Inputs

1. Connect signal to the meter using the appropriate wire (e.g. type J thermocouple wire to recalibrate type J input), see page 18.
2. Set up the meter to accept the selected input (e.g. type J T/C), see page 29.
3. Set up the meter to display temperature in degrees Fahrenheit, see page 30.
4. Apply signal corresponding to input 1 (32°F) and program display 1 to 32, see page 34.
5. Apply signal corresponding to input 2 (1182°F for type J) and program display 2 accordingly, see page 34.
6. After the meter accepts input 2, the display flashes the message $\mathit{C\ Jr}$ that indicates the meter is sensing the cold junction reference. This completes the recalibration procedure for the selected input.

Recalibrating Process Inputs (ICAL)

The *Internal Calibration* (ICAL) menu, located in the Advanced features menu, is used to recalibrate the current and voltage inputs. Recalibration is recommended at least every twelve months.

Refer to Internal Calibration (ICal), page 58 for instructions.

Setting the Relay Operation (ｒＥＬＹ)

This menu allows you to set up the operation of the relays:

1. Relay action
   a. Automatic reset only (non-latching)
   b. Automatic + manual reset at any time (non-latching)
   c. Latching (manual reset only)
   d. Latching with Clear (manual reset only after alarm condition has cleared)
   e. Pump alternation control (automatic reset only)
   f. Off (relay and status LED disabled)
2. Set point
3. Reset point
4. Fail-safe operation
   a. On (enabled)
   b. Off (disabled)
5. Time delay
   a. On delay (0-199 seconds)
   b. Off delay (0-199 seconds)
6. Break Condition Behavior
   a. Off (non-alarm condition)
   b. On (alarm condition)

> Refer to page 24 for a description of *Display Functions and Messages*

Press **Enter/Ack** button to access any menu
Press **Menu** button to exit at any time
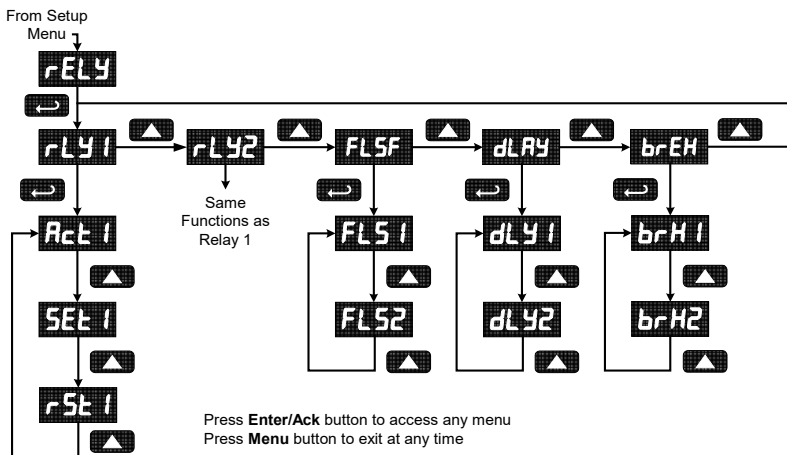

Setting the Relay Action

The relays' *Action* menu allows the user to set up the operation of the relays. The relays may be set up for any of the following modes of operation:

1. Automatic reset (non-latching)
2. Automatic + manual reset at any time (non-latching)
3. Latching (manual reset only, at any time)
4. Latching with Clear (manual reset only after alarm condition has cleared)
5. Pump alternation control (automatic reset only)
6. Off (relay and status LED disabled)

The following graphic shows relay 1 action setup; relay 2 is set up in a similar fashion.
Programming Set and Reset Points

High alarm indication: program set point above reset point.

Low alarm indication: program set point below reset point.

The deadband is determined by the difference between set and reset points. Minimum deadband is one display count. If set and reset points are programmed the same, relay will reset one count below set point.
Quick Set Points

Press **Up** arrow and **Menu** at the same time to access set/reset points quickly.

Setting Fail-Safe Operation

The fail-safe operation is set independently for each relay. Select **on** to enable or select **oFF** to disable fail-safe operation.

Press **Enter/Ack** button to accept setting
Press **Menu** button to exit at any time
Programming Time Delay

The *On* and *Off* time delays may be programmed for each relay between 0 and 199 seconds. The relays will transfer only after the condition has been maintained for the corresponding time delay.

The *On* time delay is associated with the set point.

The *Off* time delay is associated with the reset point.
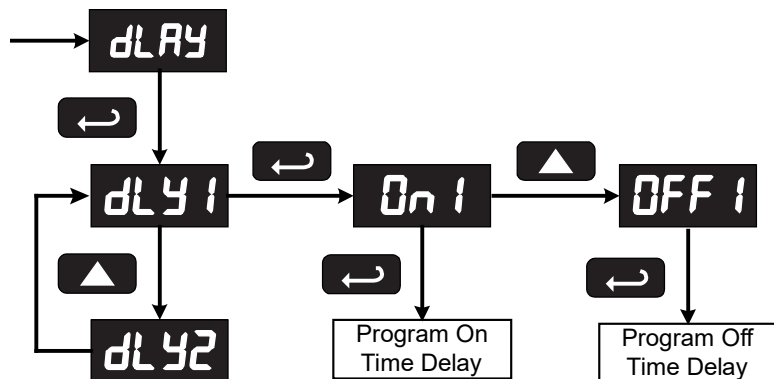

Setting Sensor Break Condition

The sensor break relay condition may be programmed for each relay as *On* (alarm) or *Off* (non-alarm). The relays will enter these states when a sensor break is detected for RTD or thermocouple inputs. These settings have no effect when current or voltage inputs are selected.

Press **Enter/Ack** button to accept setting
Press **Menu** button to exit at any time
Relay and Alarm Operation

The following graphs illustrate the operation of the relays, status LEDs, and ACK button.

High Alarm Operation (Set > Reset)
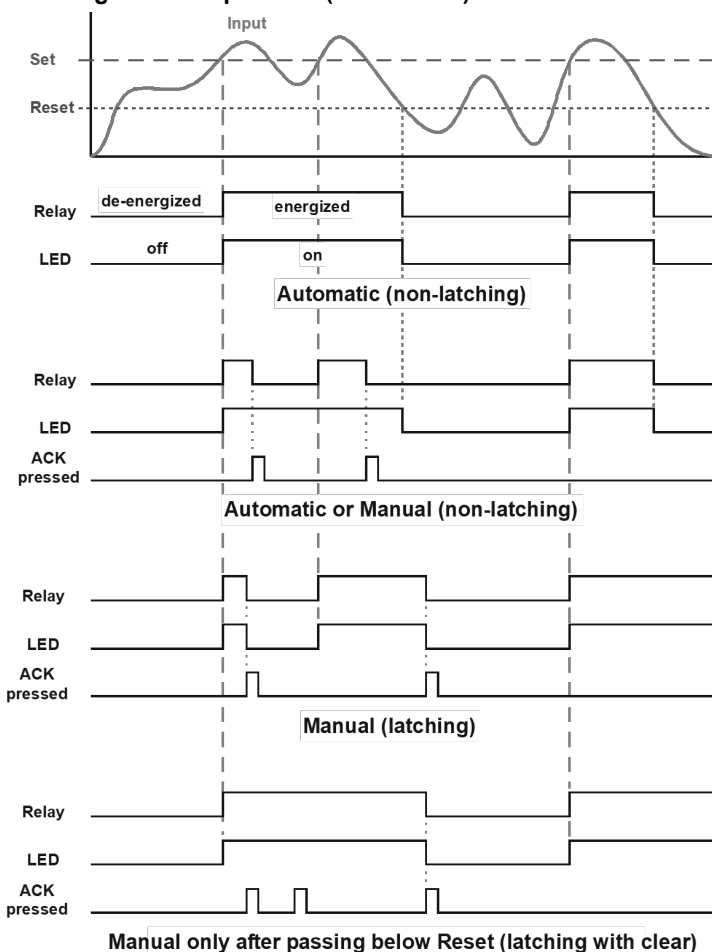

Automatic (non-latching)

Automatic or Manual (non-latching)

Manual (latching)

Manual only after passing below Reset (latching with clear)

For Manual reset mode, ACK can be pressed anytime to turn "off" relay. For relay to turn back "on", signal must go below set point, and then go above it.

40

Low Alarm Operation (Set < Reset)
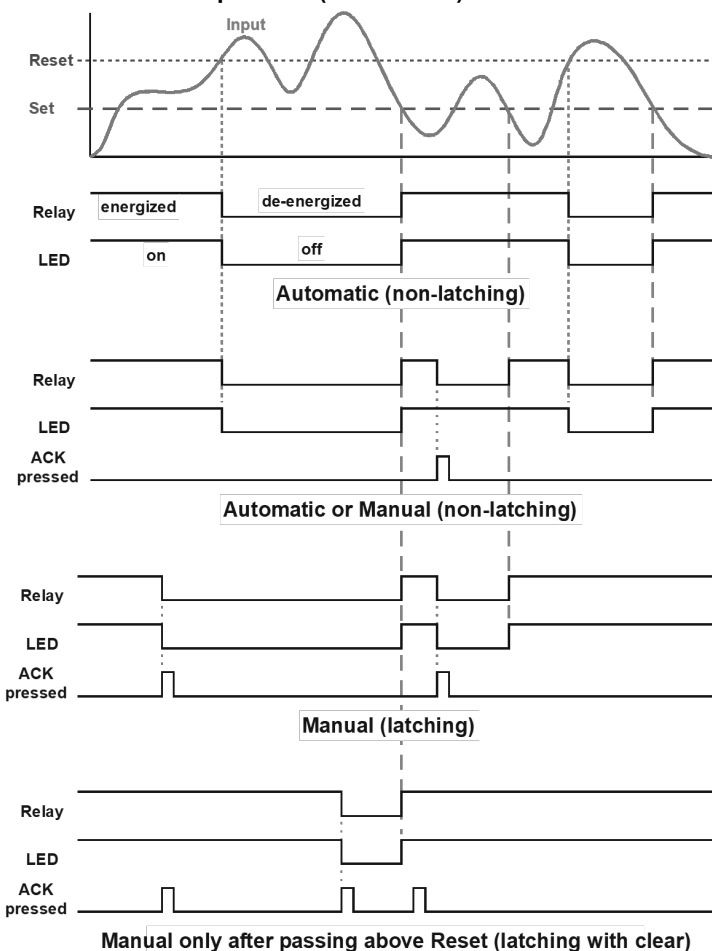

Automatic (non-latching)

Automatic or Manual (non-latching)

Manual (latching)

Manual only after passing above Reset (latching with clear)

For Manual reset mode, ACK can be pressed anytime to turn "off" relay. For relay to turn back "on", signal must go above set point, and then go below it.

Time Delay Operation

The following graphs show the operation of the time delay function.

On Time Delay
Off Time Delay

If the signal crosses the set point, the *On* time delay timer starts and the relay trips when the time delay has elapsed. If the signal drops below the set point (high alarm) before the time delay has elapsed, the *On* time delay timer resets and the relay does not change state. The same principle applies to the *Off* time delay.

* Note: The LED is not affected by Time Delay when *"Automatic or Manual"* reset mode is selected. Rather the LED follows the set and reset points.

High Alarm with Fail-Safe Operation (Set > Reset)
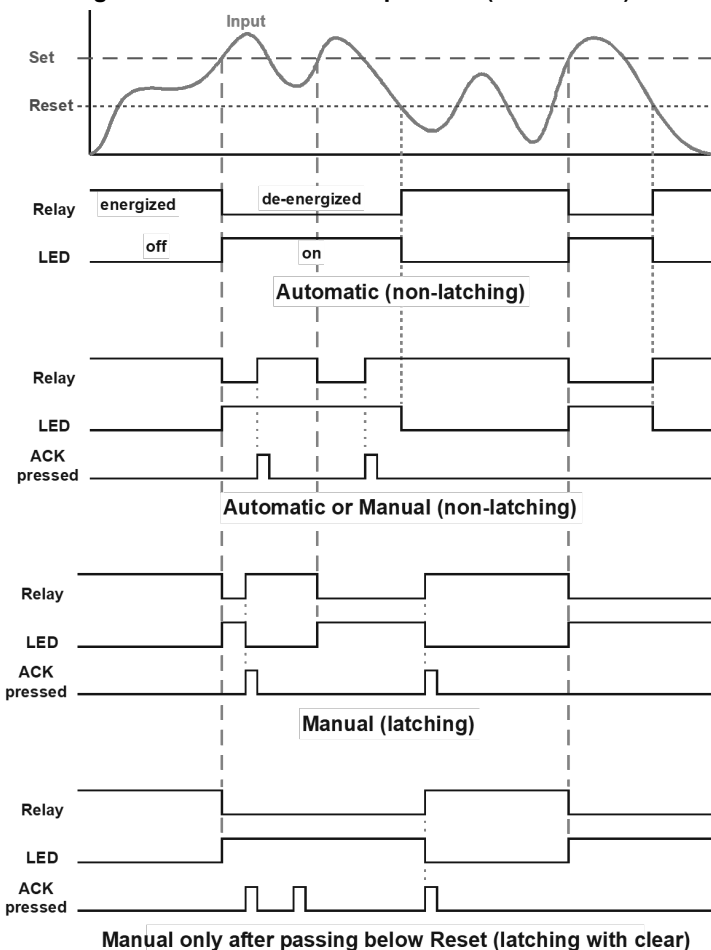

Automatic (non-latching)

Automatic or Manual (non-latching)

Manual (latching)

Manual only after passing below Reset (latching with clear)

Fail-safe operation: relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Low Alarm with Fail-Safe Operation (Set < Reset)
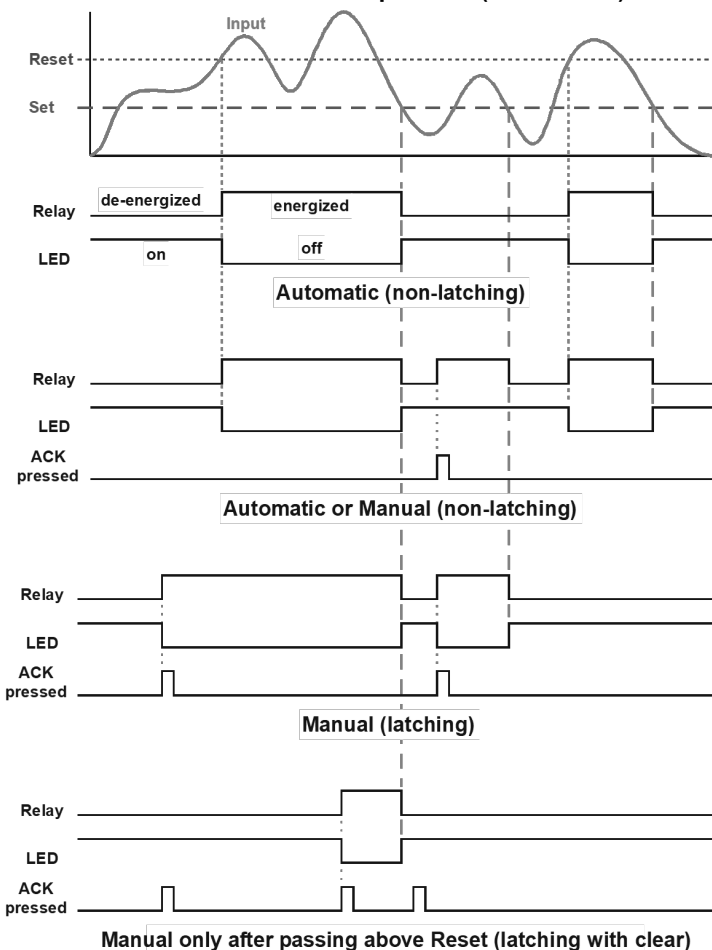

Reset

Set

ACK pressed

Manual only after passing above Reset (latching with clear)

Fail-safe operation: relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Pump Alternation Control Operation
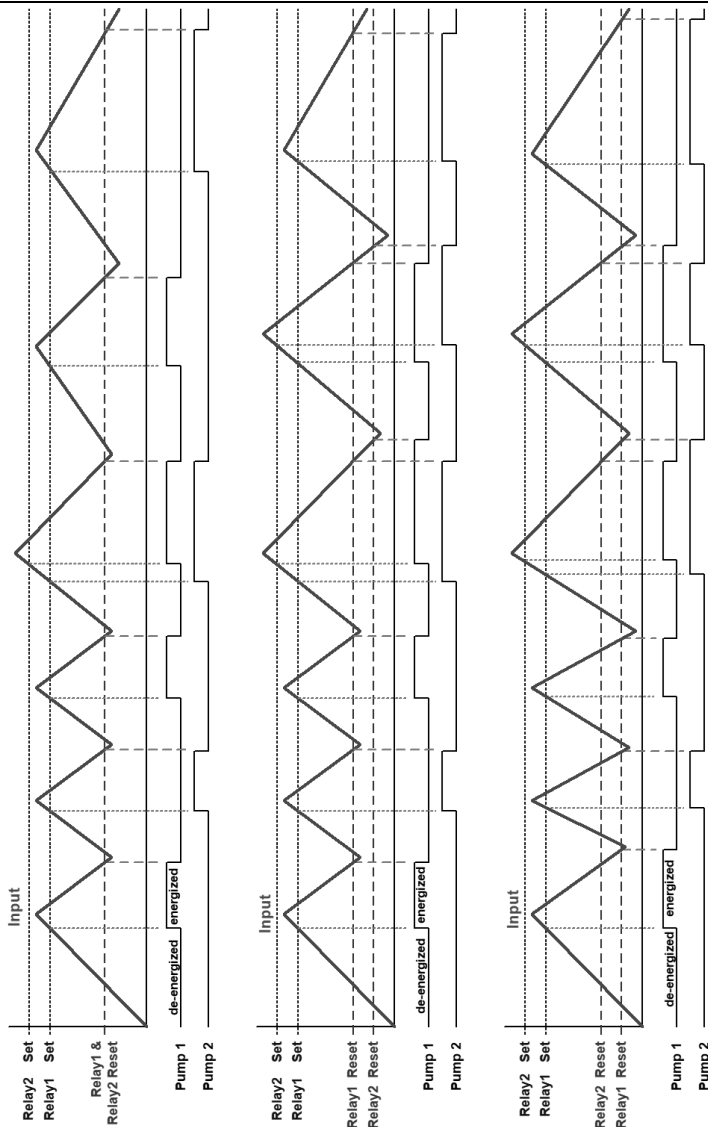

LEDs indicate the relay status

Scaling the 4-20 mA Analog Output (Rout)

The 4-20 mA analog output can be scaled to provide a 4-20 mA signal for any display range selected.

No equipment is needed to scale the analog output; simply program the display values to the corresponding mA output signal.

Depending on the version of meter purchased, the *Analog Output* menu may not appear in the *Setup* menu. This menu is enabled or disabled at the factory via the *Advanced Features* menu. For more information on the Advanced Features Menu see page 49.

The *Analog Output* menu is used to program:

1.   4-20 mA output based on display values

2.   Sensor break value in mA

Press Enter to Accept Setting

Press Up to Set Digit Value

Press Right to Select Next Digit

Press Menu to Exit at any Time

Set Display 1
Value

Set Output 1
Value

Scale
Output 2
For instructions on how to program numeric values see *Setting Numeric Values*, page 27.

Program the Sensor Break Output Value (SEbr)

The sensor break value corresponds to the output signal generated when the meter detects a sensor break for thermocouple and RTD inputs.

For example if there is an open thermocouple, the meter displays the message "oPEn" and the analog output goes to the programmed sensor break value (e.g. 3.00 mA).

The sensor break value can be programmed from 0.00 to 23.99.
The typical output signal range is 1.00 to 23.00 mA (e.g. If sensor break value is programmed to 0.00, the actual output will not be greater than 1.00 mA).

Press Enter to Accept Setting

Press Up to Set Digit Value

Press Right to Select Next Digit

Press Menu to Exit at any Time

Program Menu

Set Sensor
Break Value
Analog Output when Display is Out of Range

The analog output reflects the display out of range conditions as follows:

Input Condition	Display	Analog Output
Underrange	Flashing - 1999	3.00 mA
Overrange	Flashing 9999	21.00 mA
Open TC or RTD	Flashing oPEn	Sensor break value

Setting Up the Password (*PASS*)

The *Password* menu is used to program a four-digit password to prevent unauthorized changes to the programmed parameter settings.

Locking the Meter

Enter the *Password* menu and program a four-digit password.

For instructions on how to program numeric values see Setting Numeric Values, page 27.

Run Mode

Program
Password
Record the password for future reference. If appropriate, it may be recorded in the space provided.

Model:	
Serial Number:	
Password:	__ __ __ __

Unlocking the Meter

If the meter is password protected, the correct password must be entered in order to make changes to the parameter settings.

Run Mode
Enter
Password

Entering the correct four-digit number sets the password to 0000, disabling the protection.

Changes to the programmed parameter settings are allowed only with the password set to 0000.

If the password entered is incorrect, the meter displays *LoCd* (Locked) for about two seconds, then it returns to Run Mode. To try again, press **Enter/Ack** while the *Locked* message is displayed.

Forgot the Password?

The password may be disabled by the following procedure:

1. Note display reading prior to pressing the Menu button. Ignore decimal point and sign.

2. Access the *Password* menu, add 2 to the noted reading and enter that number as the password (e.g. display reading = -1.23, password = 0125).

Advanced Features Menu

To simplify the setup process, functions not needed for most applications are located in the *Advanced Features* menu.

Press the **Right** arrow and **Menu** button simultaneously or hold the Menu button for approximately 3 seconds to access the *Advanced Features Menu* of the meter.
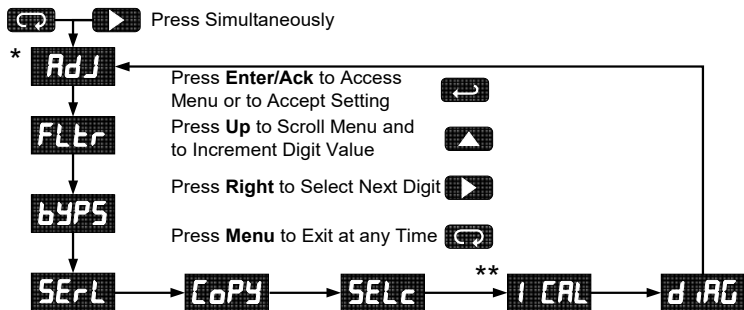

* Available for temperature inputs only

* * Available for process inputs only

Advanced Features Menu & Display Messages

Display	Parameter	Action/Setting
Rd J	*Adjust*	Set offset adjustment for temperature, not available for process inputs
FLtr	*Filter*	Set noise filter value
bYPS	*Bypass*	Set filter bypass value
SErL	*Serial*	Set serial communication parameters
Prot	*Protocol*	Enter the Protocol menu
PdC	*PDC*	Select PDC protocol
m bS	*Modbus*	Select Modbus protocol
Rddr	*Address*	Set meter address
bRud	*Baud rate*	Select baud rate
trdE	*Transmit delay*	Set transmit delay for serial communication
PrtY	*Parity*	Select none, even, or odd (Modbus only)
tbYt	*Byte-to-byte*	Program byte-to-byte timeout (silent time – Modbus only)
CoPY	*Copy*	Enter copy function
SEnd	*Send*	Send meter settings to another meter
donE	*Done*	Copy function completed
SELc	*Select*	Enter the Select menu (function, cutoff, out)
Func	*Function*	Select linear or square root function
L inr	*Linear*	Set meter for linear function
S9rt	*Square root*	Set meter for square root extraction
cutF	*Cutoff*	Set low-flow cutoff
out	*Output*	Set meter for either relay or analog output **(factory set only – only included in certain models**
Rout	*Analog output*	Set meter for analog output option
rELY	*Relay*	Set meter for relay option
Rout	*Analog output*	Enable or disable analog output **(factory set only – only included in certain models**
YES	*Yes*	Enable analog output
no	*No*	Disable analog output
IntY	*Intensity*	Select display intensity

Display	Parameter	Action/Setting
ICRL	*Initial calibration*	Enter initial calibration for process inputs
Curr	*Current*	Calibrating current input
I Lo	*I low*	Calibrate low current input
I H i	*I high*	Calibrate high current input
UoLt	*Volt*	Calibrating voltage input
uLo	*V low*	Calibrate low voltage input
uH i	*V high*	Calibrate high voltage input
d iRG	*Diagnostics*	Display parameter settings
LEd	*LED*	Test display
CJC	*CJC*	Display cold junction compensation voltage
CFG	*CFG*	Display meter configuration
PtS	*Points*	Display calibration points for process inputs
rELY	*Relays*	Display relay settings
Rout	*Analog output*	Display analog output settings
GoFF	*Gain/offset*	Display gain and offset for process inputs
SErL	*Serial*	Display serial communication settings
InFo	*Information*	Display software version and S/N information

Offset Adjustment (*Adj*)

This parameter allows the user to select an offset adjustment to the temperature being displayed. Offset adjustment values can be either positive or negative and can be any number within ±19.9°. The offset adjustment value is programmed through the *Adjust* menu.

The offset adjustment feature can be useful to compensate for errors due to thermocouple junctions or excessive lead wire resistance in RTDs.

The offset adjustment value is automatically reset to zero whenever the type of temperature sensor is changed (*i.e.* Thermocouple type or RTD curve).

Celsius/Fahrenheit conversion of the offset adjustment value is automatic, see note 2 below for important limitations.

Notes:

1. Offset adjustment is available only when TC or RTD input is selected.
2. If adjustment value is greater than 11°C and the temperature scale is changed to Fahrenheit, the maximum applied adjustment will be 19.9°F.

Noise Filter (*FLtr*)

Most applications do not require changing this parameter. It is intended to help attain a steady display with an unsteady (noisy) input signal.

The field selectable noise filter averages any minor or quick changes in the input signal and displays the reading with greater stability.

Increasing the filter value will help stabilize the display, however this will reduce the display response to changes on the input signal.

The filter level may be set anywhere from 2 to 199.

Setting filter value to zero disables filter function, and bypass setting becomes irrelevant.

Noise Filter Bypass (bYPS)

The meter can be programmed to filter small input changes, but allow larger input changes to be displayed immediately, by setting the bypass value accordingly.

If the input signal goes beyond the bypass value, it will be displayed immediately with no averaging done on it.

The noise filter bypass value may be set anywhere from 0.2 to 99.9. It corresponds to percentage of full scale for process inputs and to degrees Fahrenheit for temperature inputs.

Increasing the bypass value may slow down the display response to changes on the input signal.

Serial Communications (SErL)

The meter is equipped with serial communications capability as a standard feature using PDC Serial Communication Protocol. The Modbus RTU protocol is included on all models after 5/1/2010. To communicate with a computer or other data terminal equipment, an RS-232 or RS-485 adapter is required.
When using more than one meter in a multi-drop mode, each meter must be provided with its own unique address. The address may be programmed from 00 to 99 for PDC protocol and from 1 to 247 for Modbus protocol. The transmit delay may be set between 0 and 199 ms.

The LDM4LSP2 can also be connected directly to another LDM4LSP2 meter through a cable assembly. This allows the user to copy all the settings from one meter to another, using the *Copy* function.

Protocol Selection Menu (Prot)

The Protocol selection menu is used to select either the PDC or the Modbus protocol.

Select Menu (5ELc)

The *Select* menu is used to select linear or square root function, display intensity, and low-flow cutoff. Selection for relay or analog output is a factory setting depending on the option installed.

> • Output options are installed and set up at the factory.
> • Changing the output selection will cause erroneous operation.

Note:
Depending on meter model, the *Select* menu will display either *out* or *Aout*. In either case, the output selection menu is for factory use only. Do not attempt to change output selection.
Linear or Square Root Function (L ınr or 59rt)

Meters are set up at the factory for linear function. The linear function provides a display that is linear with respect to the input signal.

The square root function is used to linearize the signal from a differential pressure transmitter and display flow rate in engineering units.

Advanced Features

Press Enter to Accept Setting
Low-Flow Cutoff (ᴄᴜᴛF)

The low-flow cutoff feature allows the meter to be programmed so that the often-unsteady output from a differential pressure transmitter, at low flow rates, always displays zero on the meter.

The cutoff value may be programmed from 0 to 9999. Below the cutoff value, the meter will display zero. Programming the cutoff value to zero disables the cutoff.

MeterView Software

MeterView software allows the LDM4LSP2 to be programmed from a PC and to act as a data logger.

MeterView software allows all setup parameters to be saved to a file for reporting, restoring, or programming other meters.

See *Ordering Information*, page 3 to order MeterView software.

Note: PDC protocol must be selected to communicate with MeterView.

Meter Copy Function (ᒪoPᎩ)

The *Copy* function is used to copy (or clone) all the settings from one meter to other meters requiring exactly the same setup and program-ming (*i.e.* type of input, scaling, decimal point, filter, bypass, etc.).
Figure 15. Meter Copy Connection

Copy Function Requirements

To successfully copy settings from one me-ter to another, both meters must have:
1. *Same software version*
2. *Same baud rate setting*
3. *PDC protocol selected*

See *Determining Software Version*, page 64 for instructions.

Meter Cloning Instructions

NOTICE!	*Do not connect the two meters to the same 4-20 mA loop while cloning. Internal calibration may be affected.*

1. Connect the two meters using a cable assembly (e.g. Digi-Key P/N H1663-07-ND) which does not exceed 7' (2.1 m).
2. Power up both meters. Leave Clone meter in Run Mode.
3. Enter the *Advanced Features Menu* of the Master meter, see *Advanced Features Menu*, page 49.
4. Scroll to *Copy* function using **Up** arrow button then press **Enter/Ack**.
5. The meter displays the message 5End. Press **Enter/Ack**, the display flashes while sending data. The message donE is displayed when copying is completed.
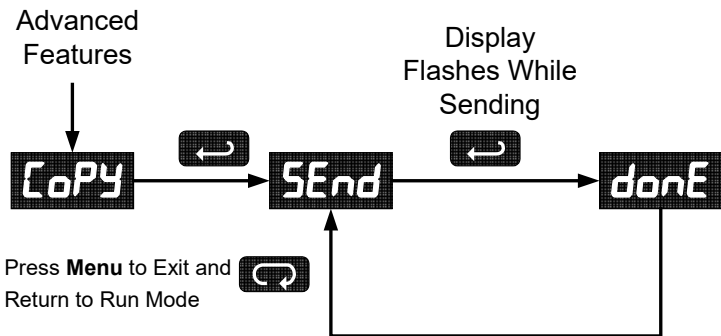

6. The Clone meter displays the memory address being programmed then the message donE when copying is completed. The meter initializes and returns to Run Mode using the same settings as the Master.
7. If meter to be cloned does not respond to the data being sent, refer to **Copy Function Requirements** above.

Internal Calibration (ICAL)

> • There is **no need to recalibrate** the meter when first received from the factory.
>
> • The meter is *factory calibrated* prior to shipment, for all input types, in milliamps, volts, and degrees respectively. The calibration equipment is certified to NIST standards.

The internal calibration allows the user to scale the meter without applying a signal. This menu is not available if the meter is set up for TC or RTD inputs.

The use of calibrated signal sources is necessary to perform the internal calibration of the meter.

Check calibration of the meter at least every 12 months. Each input type must be recalibrated separately, if meter will be used with all input types.

> Notes:
>
> • If meter is in operation and it is intended to accept only one input type (e.g. 4-20 mA), recalibration of other inputs is not necessary.
>
> • Allow the meter to warm up for at least 15 minutes before performing the internal calibration procedure.

The *Internal calibration* menu is part of the *Advanced Features Menu*.

1. Press the Right arrow **and** Menu button simultaneously **or** hold the Menu button for approximately 3 seconds to access the *Advanced Features Menu* of the meter.

2. Press the **Up** arrow button to scroll to the *Internal calibration* menu and press **Enter/Ack**.

3. The meter displays either current (Curr) or voltage (Uolt), according to the meter input setup. Press **Enter/Ack** to start the calibration process.

Example for current input internal calibration:

4. The meter displays *Low* input current (*I Lo*). Apply the low input signal and press **Enter/Ack**. The display flashes for a moment while meter is accepting the low input.

5. After the display stops flashing, a number is displayed with the left-most digit brighter than the rest. The bright digit is the active digit that can be changed by pressing the **Up** arrow button. Press the **Right** arrow button to move to the next digit.

6. Set the display value to correspond to the input signal being cali-brated.

7. The display moves to the high input calibration (*I Hi*). Apply the high input signal and press **Enter/Ack**.

8. Set the display for the high input calibration in the same way as it was set for the low input calibration.

> For instructions on how to pro-gram numeric values see Set-ting Numeric Values, page 27.
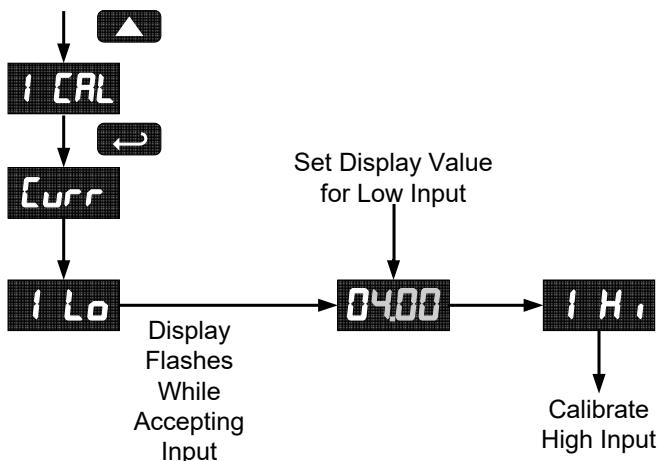

The graphic above shows the calibration of the current input. The volt-age input is calibrated in a similar way.

Tips:

- Low and high input signals can be any valid values within the range of the meter.
- Observe minimum input span requirements between input 1 and input 2.
- Low input must be less than high input signal.

Error Message (*Err*)

An error message indicates that the calibration or scaling process was not successful.

After the error message is displayed, the meter reverts to input 1, allowing the appropriate input signals to be applied.

The error message might be caused by any of the following conditions:

1. Input signal is not connected to the proper terminals, or it is connected backwards.
2. Wrong signal selection in *Setup* menu.
3. Minimum input span requirements not maintained.

Minimum Input Span

The minimum input span is the minimum difference between input 1 and input 2 signals required to complete the calibration or scaling of the meter.

Input range	Input 1 & input 2 span
4-20 mA	0.40 mA
±10 VDC	0.20 VDC

OPERATION

For process inputs, the meter is capable of accepting positive and negative signals and displaying these signals in engineering units from -1999 to 9999 (*e.g.* a signal from -10 to +10 VDC could be displayed as -10.00 to 10.00).

The temperature inputs are displayed according to the input type and temperature units (°F or °C) selected. RTD and Type T thermocouple inputs can be displayed with either 1° or 0.1° resolution.

Front Panel Buttons Operation

Button Symbol	Description
	Press to enter or exit Programming Mode, view settings, or exit Max/Min readings Hold to enter *Advanced* features menu.
	Press to reset Max/Min readings
	Press to display Max/Min readings alternately
	Press to display Max/Min reading indefinitely while displaying Max/Min Press ACK to acknowledge relays

Maximum/Minimum Readings

The main function of the front panel buttons during operation is to display the maximum and minimum readings reached by the process or temperature inputs.

Figure 17. Case Dimensions – Top View

TROUBLESHOOTING

Due to the many features and functions of the meter, it's possible that the setup of the meter does not agree with what an operator expects to see. If the meter is not working as expected, refer to the *Diagnostics* menu and consult the recommendations described below.

Diagnostics Menu (*d ıAG*)

The *Diagnostics* menu is located in the *Advanced Features Menu*, to access *Diagnostics* menu see *Advanced Features Menu*, page 49.

It provides an easy way to view the programmed parameter settings for troubleshooting purposes. Press the **Enter/Ack** button to view the settings and the **Menu** button to exit at any time.

For a description of the diagnostics messages *see* Advanced Features Menu & Display Messages, page 50.

Determining Software Version

To determine the software version of a meter:

1. Go to the *Diagnostics* menu (*d ıAG*) and press **Enter/Ack** button.
2. Press **Up** arrow/**Max** button and scroll to Information menu (*ınFo*).
3. Press **Enter/Ack** to access the software number (*SFt*), version (*UEr*). Write down the information as it is displayed. Continue pressing **Enter/Ack** until all the information is displayed.

Reset Meter to Factory Defaults

When the parameters have been changed in a way that is difficult to determine what's happening, it might be better to start the setup process from the factory defaults.

Instructions to load factory defaults:

1. Enter the *Advanced Features Menu*. See *Advanced Features Menu*, page 49.
2. Press **Up** arrow to go to *Diagnostics* menu
3. Press and hold **Right** arrow/Reset for five seconds, press **Enter/Ack** when display flashes ʳᴱ5ᴱᴸ.
    Note: If **Enter/Ack** is not pressed within three seconds, display returns to *Diagnostics* menu.
4. The meter goes through an initialization sequence (same as on power-up), and loads the factory default settings.

Press Simultaneously

Flashing
Display

dıAG → rSEt → Meter Re-Initializes

Press and Hold
for 5 Sec
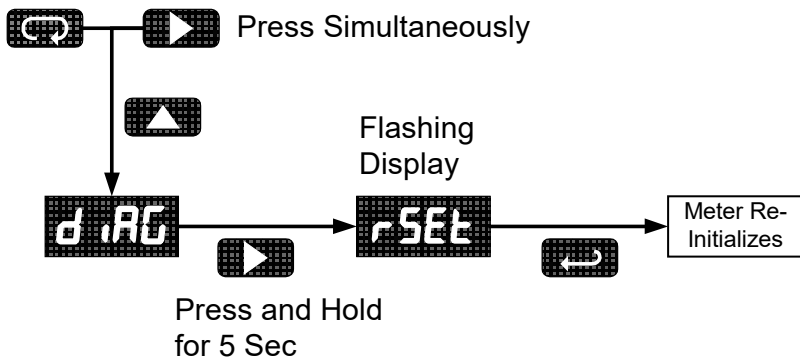

Factory Defaults & User Settings

The following table shows the factory setting for most of the programmable parameters on the meter. Next to the factory setting, the user may record the new setting for the particular application. MeterView software allows the saving of all meter parameters to a file for restoring meter settings, reporting, and copying settings to other meters.

Byte-to-byte timeout*	**tbYt**	0.01 sec	

*Note:
The byte-to-byte timeout setting might be updated automatically depending on the baud rate selected and the previous timeout setting. The minimum timeout allowed is saved to memory if a lower value is entered (e.g. If user enters 0.00 with a baud rate of 300, 0.06 is saved).

Troubleshooting Tips

Symptom	Check/Action
No display at all	Check power at power connector
Not able to change setup or pro-gramming, $LoEd$ is displayed	Meter is locked, enter correct four-digit password to unlock
Meter displays error message dur-ing calibration (Err)	Check: 1. Signal connections 2. Input selected in *Setup* menu 3. Minimum input span requirements
Meter displays • $oPEn$ • 9999 • -1999 • Displays negative number, not responding to RTD.	Check: 1. Input selected in *Setup* menu 2. TC/RTD Switch position 3. Corresponding signal at Signal connector
Display alternates between 1. Hi and a number 2. Lo and a number	Press **Menu** to exit Max/Min display readings.
Display response is too slow	Check filter and bypass values
Inaccurate temperature reading	Check: 1. Temperature units (°F or °C) 2. TC type or RTD curve selected 3. Offset adjustment 4. TC wire used 5. Calibration
If the display locks up or the meter does not respond at all	Cycle the power to restart the microprocessor.
Relay operation is reversed	Check: 1. Fail-safe in *Setup* menu 2. Wiring of relay contacts
Relay and status LED do not respond to signal	Check: 1. Relay action in *Setup* menu 2. Set and reset points
Meter not communicating with MeterView or other programs	Check: 1. Serial adapter and cable 2. Serial protocol selected 3. Meter address and baud rate 4. MeterView address and baud rate
Other symptoms not described above	Call Technical Support for assistance.

| Pushbutton	Function
Menu	Go to Programming Mode or leave Programming, Advanced Features, and Max/Min Modes.
Right Arrow	Move to next digit.
Up Arrow	Move to next selection or increment digit.
Enter/Ack	Accept selection/value and move to next selection.

Right Arrow & **Menu** simultaneously enters Advanced Features

Max/Min Mode
While in Run Mode, pressing **Up** Arrow will initiate Max/Min Mode. **Up** Arrow toggles between Max & Min displays, and **Right** Arrow resets the Max/Min to the current value. Press **Menu** or wait 10 seconds to return to Run Mode. Pressing **Enter/Ack** will disable the 10 second timeout and continuously display Max or Min.

Press **Right** arrow and **Menu** to access Advanced Features Menu

When the meter is locked, Adjust, Filter and Bypass can only display their settings, and the Copy and ICAL functions are not available.

EU DECLARATION OF CONFORMITY

Issued in accordance with ISO/IEC 17050-1:2004.

We,

Lumenite Controls Technology, Inc.
2331 N 17th Ave
Franklin Park, IL 60131 USA

as the manufacturer, declare under our sole responsibility that the product(s),

Model LDM4LSP2 Large Display Process and Temperature Meter

to which this declaration relates, is in conformity with the European Union Directives shown below:

2014/35/EU	**Low Voltage Directive**
2014/30/EU	**EMC Directive**
2011/65/EU	**RoHS Directive**

This conformity is based on compliance with the application of harmonized or applicable technical standards and, when applicable or required, a European Union notified body certification.

Standards:

EN 55011:1998
EN 61000-6-2:2001
EN 61010-1:1995
EN 61326:2006

The standards EN 55011:1998, EN 61000-6-2:2001, EN 61010-1:1995, and EN 61326:2006 are no longer harmonized. The requirements of these standards have been checked against the harmonized standards EN 55011:2009+A1:2010, EN 61000-6-2:2005, EN 61010-1:2010, and EN 61326:2013 and there were no major technical changes affecting the latest technical knowledge for the products listed above.
