Some large manufacturers who have several boat building plants have been assigned multiple codes by the U.S. Coast Guard. When entering a record for a boat made by such a manufacturer, the BMA Field code should agree with the first three characters of the boat hull number. Canadian manufacturers may apply to the U.S. Coast Guard for a manufacturer's identification code. tabewohekevosi If the U.S. Coast Guard assigns a code, it will begin with the alphabetic Z. Sections 4.2 & 4.3 contains BMA and BRA Field Codes for boat and boat part manufacturers. vohubebomofu For Boat File records, if a code is not listed, the code MISC should be entered as characters 1 through 4 of the BMA Field with the actual manufacturer's name appearing in positions 5 through 24. If the manufacturer's name is not known, positions 5 through 24 of the BMA Field should be used to describe the boat including any information which can lead to the determination of the manufacturer's name. If a brand name for a part is not listed, a Vehicle/Boat Part File record may be entered using the generic code PART in the BRA Field with information concerning the manufacturer placed in the Miscellaneous Field. For unlisted makes, the CJIS Division staff should be contacted at 304-625-3000 for code assignments. March 31, 2021 5 4.2 - Boat Make (BMA) Field Codes Sorted alphabetically by Code. If a make is not listed, the code ZZZ should be entered as characters 1 through 3 of the MAK Field with the actual manufacturer's name appearing in positions 4 through 23. This manufacturer's name will appear as entered in any record response. If the MAK Field code is ZZZ and positions 4 through 23 are blank, the MAK Field will be translated as MAK/UNKNOWN in the record response. For unlisted makes, the CJIS Division staff should be contacted at 304-625-3000 for code assignments. Additional coding instructions can be found in the Gun File chapter of the NCIC Operating Manual. For firearms (including surplus weapons) that are U.S. military-issue weapons, the MAK Field code USA should be used. Common U.S. military-issue weapons include the following U.S. Military-Issue Weapons: U.S. Military-Issue Weapons .45 caliber and/or 9 mm U.S. Submachine Guns: M1, M1A1, M1928, M1928A1(Thompson), M50, M55 (Reising), M42 (United Defense), M3, M3A1 ("Grease Gun") .45 caliber U.S. (Colt) Pistols, M1911, and 1911A1 .45 caliber U.S. Revolvers, M1917 .30 caliber U.S. Carbines, M1, M2, M3 7.62 mm U.S. Rifle, M14 5.56 mm U.S. Rifle, M16 and M16A1, etc. .30 caliber U.S. Rifles: Models 1892, 94, 96, 98 (Krag); Models 1903 and 1903A3, etc.
(Springfield); M1 (Garand); and M1917 (Enfield) .30 caliber U.S. Machine Guns (including the BAR, etc.) .410-gauge and/or .22 U.S. Survival Guns, M4 and M6 NonMilitary U.S. Government Weapons For a nonmilitary weapon bearing a U.S. Government property inscription and the manufacturer's name on the frame or receiver, the appropriate manufacturer's MAK Field code from Section 2.1 should be used. For example, MAK/SW should be used for Smith & Wesson, and MAK/CLT should be used for Colt revolvers bearing the inscription U.S. Border patrol, Naval Investigative Service, U.S. Air Force, Treasury Department, etc.
Foreign Military Weapons Foreign military firearms should be coded according to the make on the firearm. If the make is undeterminable, codes should be selected according to the country where the gun was manufactured. If neither the make nor the country where manufactured is known, additional information concerning coding can be found in the Gun File chapter in the NCIC Operating Manual. (1) This denotes any entry which was originally listed as the first word in quotes. Example: "Grice" Brown Bess (musket) In converting all entries to the database, entries with quotes would not sort correctly. These entries are now shown as follows: Grice Brown Bess (musket) - "Grice" (1) March 31, 2021 137 3 - Gun Caliber (CAL) Field Codes Firearms are identified by make, model, serial number, type (rifle, shotgun, etc.), and cartridge-type designation. Cartridge types are most often expressed in calibers (decimals of an inch) or in millimeters, for example the .357 Magnum and 9 mm Luger. It is also possible for the same cartridge to have both an English and a metric designation.
For example, the .308 Winchester is also known as the 7.62x51 NATO. A weapon with this cartridge-type designation could be entered using either the CAL 308 or 762. Entries should be made based on the markings on the weapon.
Many ammunition and weapon manufacturers name cartridge types after the company. One example is the 7mm Remington Magnum that was developed by the Remington Arms Company. The manufacturer associated with a cartridge type should not be confused with the make of the firearm. For example, the .38 Smith & Wesson(S & W) Special cartridge was developed by Smith & Wesson, but many companies manufacture weapons chambered for this cartridge type. The Caliber (CAL) Field is intended to contain the broad cartridge-type designation of a firearm. Because of the volume of cartridge types and the differing methods of measurement used (English, metric, or gauge) in identifying them, the table below has been prepared to assist in data entry. The "CAL" column contains the CAL codes, and the "Common Names/Examples" column contains common cartridge-type designation examples. In cases of ambiguity in cartridge-type designations, further identifying information, if available, should be placed in the Miscellaneous (MIS) Field.
Users will note that some cartridge types have more than one designation. Additionally, due to existing programming, the NCIC System does not distinguish between some cartridge types with similar designations.
The .308 Winchester/7.62x51 NATO, as noted above, could be entered as either 308 or 762. If entered as 762, no distinction between a 7.62x51 NATO, a 7.62x39 Soviet, or a 7.62 mm Tokarev would be made. Users should be aware of this when making Gun File inquiries, especially if an inquiry leads to multiple hits on firearms with similar cartridge-type designations. The gauge system of bore measurement is unique and totally different from the English caliber or metric methods of measurement. Shotgun gauges are normally expressed as whole numbers, followed by the word "gauge" or an abbreviation for it, for example 12-gauge or 12-ga. Under the English system of shotgun gauges, the lower the numerical value, the larger the bore diameter. With most common shotgun cartridge types, the bore diameter when expressed in decimals of an inch or millimeters is not the same as the gauge. A 12-gauge's bore diameter is not .12 caliber; nor is it 12 millimeters. The exception is the 410-gauge; it is a true .41-caliber bore diameter. There are also metric designations in use (listed below), but these will usually be designated in millimeters or with the abbreviation "mm." The appropriate gauge should be entered in the CAL Field. Some shotgun gauges are numerically the same as some calibers, especially metric designations. The weapon type should be designated in the Type (TYP) Field to eliminate any confusion.
