GuardDog

Pump Station Management Web Interface

OmniSite's GuardDog Web Interface is the industry's easiest to setup and use!

Designed for Wastewater Treatment

The GuardDog web interface was specifically designed for wastewater treatment operators to give them the ability to easily view alarms and analyze trends at their sewage pumping stations. The interface is a culmination of ten years of experience, customer suggestions and brainstorming sessions. The result? GuardDog has set the standard for the industry, with its intuitive navigation and graphical interface, any novice can become an expert.

Simple to Use

GuardDog was designed to be simple to use, while providing best in class features and options. Initial setup of the system is quick and easy. Within minutes, customers will be creating graphs, exporting their data, performing advanced data analyzation and more—and they won't need to be an engineer to do it!

Peace of Mind

Web-based technology makes it possible to monitor pump stations any day, any time, from any computer. With increasing environmental concerns, GuardDog will give wastewater treatment plant operators peace of mind that their equipment is working properly!

Quick Overview

The Essentials:
Graphing and Charting
Interactive Mapping
Exporting to PDF, XLS and DOC
Notifications via phone, email & text
Alarm History Logs
Pump Data, Rainfall and Influent Reports

Plus many more exciting features, take the product tour on the website for more info!

Website Highlights:
Interactive mapping by Yahoo!™
Quick setup and easy to use
Intuitive navigation
Detailed graphs and charts
Real time weather updates
Easy to organize and print reports
