Toxin Sensors

December 16, 2020

New Product Release

New products CM-2010 and CM-2010SV exceeds the most stringent recommendations in DOT/FAA/AR-09/49.

Tooele Utah, December 16, 2020. Toxin Sensors launched its new portable carbon monoxide detector series today. The new model series (CM-2010 and CM-2010SV) build on the value and performance of the existing models by increasing the sound level to exceed the recommendations in DOT/FAA/AR-09/49. The new product exceeds all of the recommendations in section B.2.3 of DOT/FAA/AR-09/49.

“The increased sound level will help the pilot hear the carbon monoxide alarm even in very noisy cockpits”, said Bob Mosso of Toxin Sensors.

Pricing is available on request and will remain the most competitive for this product style. Toxin Sensors is proud to make our products in the USA and offer the best value even in comparison to competitors with lower quality manufacturing locations.

Product will be shipping to select distributors imminently and available by January 2021.

About Toxin Sensors

Toxin Sensors is a privately held family business that specializes in portable carbon monoxide detectors for small aircraft, long haul truckers and anyone wanting to be quickly aware of their exposure.
