

Process Units | Process Equipment

Nexo Solutions is a total technology solutions provider for the process industry globally. The company also provides a large variety of processing equipment and parts for several units. From contactors and regenerators, to pumps, filters, coalescers and many others. The equipment can be used and carefully reconditioned or it can be new built. Our large used equipment selection in association with ARC Energy often accommodates most project needs.

With short delivery times and lower costs, used and reconditioned equipment is a new solution for companies looking for value, short delivery and flexibility. All equipment parts are inspected in detailed and reconditioned in a specialized fabrication shop. All pieces of equipment are also subjected to extensive testing and certifications prior to deployment and installation.

Field services can include installation, commissioning and training to ensure the proper operation and maintenance.
