Hundreds of Vegetables

Grow hundreds of flowers and vegetables in under two hours/labor

Never Water Your Plants Again!

We at Torpedopot™ believe that our patented Self-watering Planters will grow the already expanding garden industry. With our planters, users can produce hundreds of fruits, vegetables, and plant foliage by just turning a knob. You can grow thousands of plants with no tools, only a couple hours of work for the whole growing season, and within two square feet. We manufacturer:

- Self-watering Planters and Urns, Birdbaths, etc
- Self-watering Gardens: You can grow hundreds of vegetables in two square feet of space
- Home automated watering networks: Water and feed nutrients to all of the plants in our house by plugging each planter into the wall, like your plug in a hair dryer.
- Outdoor automated watering networks; Water and feed nutrients to every plant in your garden or small bush/tree can be watered using our outdoor network.
- Garden Grids that can grow 3.5 million plants in a football field. Great for natural disasters.

*Our newer technologies use energy from the water to power the planter

We are determined to have a Torpedopot in every house within the next 20 years. I have attached a brochure of one of our Self-watering planters. If you have the time, I strongly urge that you take a detailed look at our products because buyers see how our technology will take the industry by storm.

All of our planters, birdbaths, urns, etc can be fully automated, and they produce the highest yields in the world using just one square foot of space. The below planters have the ability to grow over 100 flowering plants that can extend out about 16 feet. The colors are unbelievable!
