**(2) For sale in 2025**

Explanations:

1. Caveat: Please reference “List of Available EVs” in DOWNLOADS. Remember these have different deliver timeframes. As data for new EVs becomes available, I will update.
2. Caveat: Information is changing all the time on many of these EVs – I will try and keep this updated as best I can.
3. Caveat: I purposely was very critical determining the matrix results to try and show more differentiation.
4. Commuting/Around Town Only – All vehicles will meet this criteria, unless you have an extremely long commute. Your eventual vehicle choice will be determined by your answers to other questions.
5. Commuting/Around Town Plus Some Longer Trips – Responses indicate a level of convenience. Also dependent on extent of chargers in your region. I left off EVs with slow chargers, as those vehicles take too long to DCFC to be considered convenient – that is not to say that it is not possible to take longer trips in those vehicles if frequent chargers are available and you are willing to make several stops.
6. All, Frequent Long Distance Trips – Only selected EVs that were close to or above 300 mile EPA Range.
