KEY TAKEAWAYS

- The Los Angeles County 2026 Primary election audit reveals 8.1% of *counted* ballots came from unqualified voters, far more than enough to change election outcomes of several state and federal races on the ballot, including the LA mayoral primary;

- Nearly four percent of voters reviewed do not exist, concluded through careful review of available commercial databases by experts in synthetic identity fraud;

- This Know-Your-Voter Study was conducted by RealAmerica.Vote, a 501 (c)(3) nonpartisan nonprofit, utilizing computer experts and private investigators to randomly validate the identity of 10,000 confirmed voters;

INTRODUCTION

The US Constitution begins with a promise. This promise makes America unique among all other nations: That the citizens are sovereign over the law.

To prevent the law and those who wield it from oppressing the citizens, the second sentence of our Constitution assigns the role of choosing Congress to the people eligible to vote in each State's elections. This way, citizens are ruled by laws they have approved. Individual liberty relies on election officials faithfully restricting voting to legally qualified voters.

To a candidate or party, a vote is transactional. Get enough of them, and you win access to power and money. This creates an obvious, eternal incentive for cheating.

To an American voter, a vote is risk management. Out of the candidates, one will end up with power over your life, family, and the fruits of your labor—blessings bestowed by "Nature and Nature's God."[1] The right to participate in choosing that person is profoundly consequential and only given to legally qualified United States citizens.

This is why failure by election officials to control access to the elective franchise is defined criminal conduct, with a 170-year history of vigorous enforcement.

THESIS

The question this study sought to answer is:

> Did Los Angeles County Registrar of Voters Dean Logan and California Secretary of State Shirley Weber qualify LA County voters in California's 2026 congressional primary election according to state law?

Our study narrowed the focus to four specific inquiries for LA County:

1. Does the voter exist?
2. Does the voter have a valid SSN?
3. Did the voter reside in LA County at any time, at any location, at least six months prior to the June 2026 primary?

METHODOLOGY

Using the official records of the LA County board of elections, we isolated the list of the voters who voted in the June 2026 primary. From this list, based on our previous studies, we isolated the cohort of all voters 25 years old and older. This strengthened our identify validation by not including younger voters who may not have yet established credit and other identity touchpoints in third party databases. The chosen cohort contributed 2,083,915 votes to the election, out of 2.2 million—94% of the votes.

[1] *U.S. Declaration of Independence*

From this cohort we randomly selected 10,000 voters. These were the individuals we examined for voter qualification compliance. This study size gives a 95% confidence interval in the extrapolated results, with a 1.0% margin of error. This means our study is at least 94% accurate.

RealAmerica.Vote performed the research in a commercial law enforcement database designed to screen for false identities and precise location. Only professionally licensed experts reviewed the records returned and assigned them to categories. RealAmerica.Vote is not licensed to review, retain or distribute the individual records.

RESULTS

Unqualified Voters	Number of Votes out of 10,000	Rate of Prevalence	Extrapo-lated Votes out of 2,084K[2]
Does Not Live in LA County	356	3.6%	74,047
Does Not Exist	318	3.2%	66,143
773-999 Range Social Security Number	103	1.0%	21,424
No SSN	35	0.3%	7,280
Total	**812**	**8.1%**	**168,894**

MARGIN OF VICTORY

With nearly 169K unqualified voters in the 2026 primary, the legal validity of numerous races and initiatives was impacted:

- In the high-profile City of Los Angeles Mayoral race, Spencer Pratt trailed Nithya Raman by **about 30,000 votes**. Since the City of Los Angeles represents about 35% of the LA County voters, 59,000 of the unqualified votes RealAmerica.Vote exposed likely originate from the City of Los Angeles, dwarfing Rahman's alleged victory margin.

[2] A small number of voters sampled had multiple disqualifying issues

- Several primary races for U.S. Representatives were decided by less than a 10,000 vote margin (e.g., 8,622 in the 26th district).
- Similarly, many State Senate and Assembly races were won with fewer than 10,000 votes (e.g., 6,770 in State Senator 24th District race).
- County-wide Measure ER (0.5% sales tax increase) was **decided by less than 30,000 votes.**

DEFINITIONS

DOES NOT LIVE IN LA COUNTY: These individuals had no active address anywhere in LA County from six months prior to the election until the present (November 1, 2025 – October 1, 2026). To qualify to vote, one must be a constituent of the electoral district in question.

DOES NOT EXIST: The problem of digital Synthetic Identity Fraud has been well documented by LexisNexis and the Federal Reserve for over a decade. It has cost banks billions of dollars in lost payments due to the sophisticated tactics of fraudsters. Our category called "Does Not Exist" comes from reporting by LexisNexis, "Although some synthetic identities may possess fictitious credit reports, they are more often seen as bureau no-hits."[3] On Wednesday, September 16, 2026 an individual was criminally sentenced in Florida for registering over 100 synthetic identities to vote.

773-999 RANGE SSN: Social security numbers beginning in the 773-999 range were only opened for use beginning in 2011 on a random assignment basis. All voters found with these SSNs were adults born well before 2011. Therefore, it can be inferred that they are foreign born. It is impossible to tell if these SSNs were assigned to naturalized citizens who can vote versus legal permanent residents or asylum seekers who cannot. The burden of proof is on the State.

NO SSN: The Help America Vote Act does allow for individuals who do not have an SSN to register to vote and vote. However, given the qualification failures already shown, how did LA County qualify voters without an SSN?

CONCLUSION

LA County has failed to restrict registration, voting and counting to qualified voters. California officials have ignored State voter eligibility requirements and chosen an ineffective means of voter qualification—if they indeed use one at all.

This is not clerical error or administrative oversight. This is open rebellion against our founding principles; the usurpation of our right to be ruled by representatives of our choosing.

"The first grand right, is that of the people having a share in their own government by their representatives chosen by themselves, and, in consequence, of being ruled by laws, which they themselves approve, not by edicts of men over whom they have no control."[4]
