

Commonly asked questions:

- 1. Recommended dosage:** 5 drops twice a day, 30 minutes before anything else you ingest, except water. Plain water is ok after 10 minutes. If new to cleansing routines or especially sensitive, work up to the full dose as your body adjusts to the movement of toxins. The bottle will last about 2 months.
- 2. Safe for pregnant women and children:** Yes. With children start with one drop, which can be administered in a bit of water if more practical.
- 3. Will MP interfere with supplements and medications:** Zeolites bind mostly to strongly positively charged substances, which almost always are toxins. Medications can fall into this category and the occasional supplement, so we suggest taking them at least one hour after MP. This gives MP time to fully absorb and travel to its preferred destination while the body isn't distracted by other supplements or medication.
- 4. Can I do other cleanses while using MP?** Yes. We especially think any of the ZenCleans kits are great companion cleanses. MP will only enhance and make safer any chosen cleanses. <https://zencleanz.com/?ref=MasterPeaceByHCS>
- 5. Is MP the only zeolites needed?** We see the wisdom in also using micronized powdered zeolites that have a bigger particle size to target the gut and larger sized toxins elsewhere in the body. Our MasterRestore (MR) is a perfect option and formulated with Fulvic acid to aid in cleansing

and to replace needed minerals in place of the toxins it is binding to. MR is meant to be used on an empty stomach, upon arising in the morning mix with plenty of water and wait at least 30 minutes before eating.

- 6. Is zeolite safe to consume in general? I've heard claims it can carry heavy metals:** We use Clinoptilolite zeolite, which is the one used for consumption. The mines that harvest it purify it to render it free of toxins so that it can magnetize positively charged molecules in your body. Additionally, the mine we use goes an extra step and handles ours differently to ensure it is not tainted even with diesel fumes. Nevertheless, there are many studies done on zeolite safety and efficacy and not one shows toxicity if using standard parameters.
- 7. Why is MasterPeace different from other nano zeolites?** Three areas are key to making MasterPeace different. 1) The 1-300 nanometer range that is achieved due to heavy research and experimentation is unmatched so that it captures trapped toxins anywhere water goes in the body, meaning inside cells. 2) Marine Plasma is the lifeblood of the sea and we use the best available. Pairing this unique source of 100% bioavailable nutrition with our nano zeolites allows it to strategically grab toxins while nourishing cells, thereby greatly reducing cleansing side effects. 3) The end product is treated with multiple processes to resonate like a strong crystal, which raises the consciousness of the liquid itself and adds to its unmatched Ormus characteristic.

8. **Does MP break a fast?** No. Zeolite is undigestible so it passes through the body undetected in that sense and the marine plasma is pre-digested.
9. **Can MP be given to pets or livestock?** Yes. 1 drop a few times a day should be sufficient for most animals, ideally in mouth or in a water bowl, if necessary. If over 100 lbs dose can be increased.
