

CENTURION K9 PROBIOTICS

put the power of billions to work for you and your animals

THE TOP 4 BENEFITS REPORTED BY USERS OF CENTURION K9 PROBIOTICS

Probiotics are not just for dogs that “need” them. All dogs benefit from healthier microbiomes.

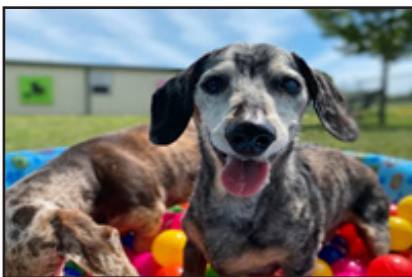

Less digestive upsets. Almost all dogs occasionally suffer from upset stomachs and or lower gi tract disturbances. These may be caused by stress from everything from stress from activity, overeating/drinking, deworming, antibiotics, travel, etc. Feeding Centurion K9 Probiotics helps to prevent associated vomiting, loose feces and diarrhea by maintaining the optimum microflora balance throughout the gi tract.

End result - more consistent stools and less gas.

Better hair and skin health. Whether dogs are outside in harsh elements or inside dogs, their hair and skin can deteriorate. As a result, hair coats lose their shine, hair becomes more brittle and shedding and itching both increase. Centurion K9 improves digestion and increases natural omega 3 long chain fatty acid production.

End result - hot spots and skin infections decrease as a result of improved immune function.

Improved health and energy. As dogs age, natural immune function declines. As a result, dogs just have less good days and can be stiffer. Over 70% of a dog's immune system is in the gi tract. Centurion K9 focuses on improving the microbiome of the gi tract. As a result, overall immunity improves.

End result - more energy and less discomfort from play and work.

Healthier longer life. Centurion K9 probiotics can help improve your dog's appetite, weight gain, and their immune system. In addition, it seems that older dogs responded even better to the positive effects of taking probiotics. Of the benefits people report from supplementing their dogs, knowing they are doing the best for their dogs is often cited.

End result - dogs and owners have more enjoyable years together.
