THE KMA SPEC

Architectural Products & Furnishings

LOOK UP! Our Amazing Ceilings Edition!

Bringing you up to date on KMA's unique architectural product collection!

This month we focus our attentions upward by highlighting products that compel us to look up. All interior projects have ceilings which may serve as a large canvas of design. A ceiling can be the star of the show, serve a purposeful function, such as enhancing your acoustics and even adding color, texture and light. Whatever goal you have for your ceiling project, KMA & Associates can steer you to the right product for the best effect. We represent two manufacturers of exciting ceilings: **Arktura** and **Unika Vaev**. If you enjoy amazing ceilings as much as we do, read on!

KMA & Associates is proud to represent

Arktura, manufacturer of inspiring ceiling and wall elements. Located in CA, Arktura is architect-owned and offers not only a wide assortment of standardized products, but also an in-house engineering team should you be interested in a customized, one-of-a-kind ceiling or wall treatment.

Right: Soft Grid Flux, an acoustic ceiling module which creates a geometric abstract shape, thanks to its interweaving network of panels made of Soft Sound® material, providing acoustic support where you need it. These intricate modules can connect together to provide acoustic comfort to an entire room or be used separately for a more focused design.

Below Right: Vapor Sky, powder-coated aluminum torsion panels offering a tile-able, cloud-like pattern, helping you bring the sky indoors. With no fading of the pattern, the cloud design can continue for as long as your hallway or space allows, without sacrificing acoustical comfort if you add our Soft Sound® backer. Or you can add our integrated lighting backer for a sky that glows. What an effect!

Want to learn more about designing amazing ceilings? Arktura will be offering an on-line CEU soon. We encourage you to sign up! There will be a choice of 2 dates:

**Wed, Jul 29, 2020 12:00 PM - 1:00 PM EDT or
Thu, Aug 6, 2020 12:00 PM - 1:00 PM EDT**

Presented by Rich Gesteland, Sr. Director, Global Business Development, Arktura LLC, you will learn about designing for specific manufacturing processes, understanding costs and budgeting, the convergence of traditional & digital tools and more. See the separate hand out and sign up today for your preferred date!

This is Trace®: featuring subtle visual interest inspired by the ephemeral beauty of mist or cirrus clouds—continuous strands weave through a grid to yield a truly elegant visual pattern. The quiet simplicity of the design makes it an ideal background for large spans and multiple rooms.

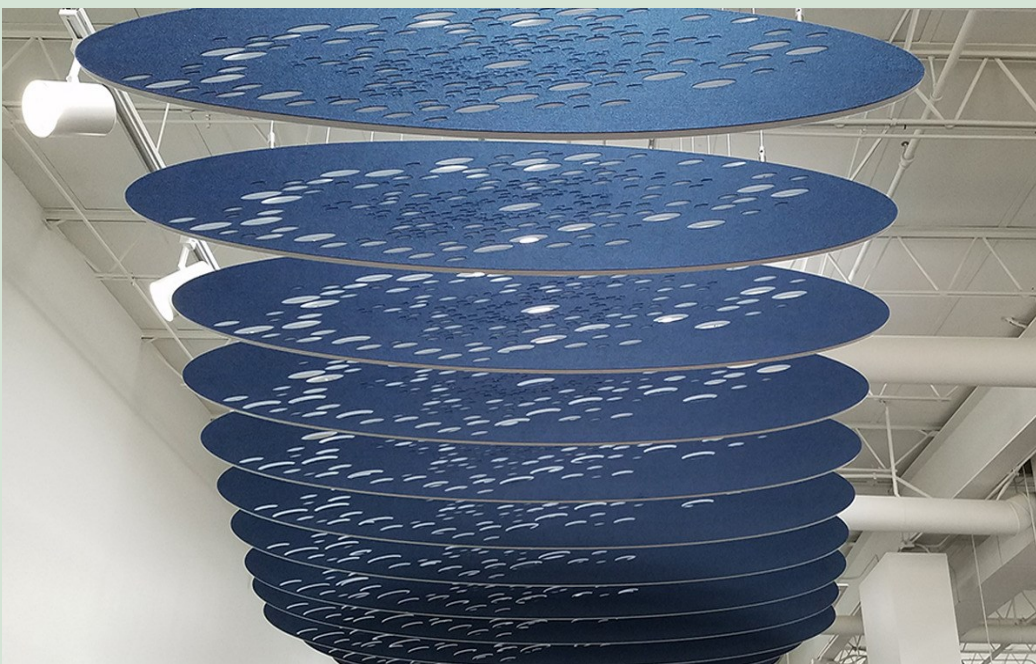

We know! AMAZING, right? See next page for Unika Vaev ceilings.

Unika Vaev was founded in 1975. The name – a source of endless questioning – means “unique weave” in Danish. Unika Vaev offers an impressive collection of acoustical products that provide absorptive, diffusive, and attenuative solutions for wall, ceiling and floor applications. Many products are designed to fit into standard ceiling grids. They also provide custom acoustical product design services for those special needs that the standard product line does not address.

Above: **The Sculpt™ Tide** tile takes its inspiration from soft ripples of water dispersing outwards. When installed in a mirrored configuration, the gentle arcs produced by each individual tile combine to form one entire circular ripple with a shallow center. When four tiles are mirrored with symmetry, large circular patterns can be formed. When two tiles are mirrored and offset to the previous row, a fish scale pattern is produced as semi-circles are clustered against each other.

- ecoustic Sculpt™ ceiling tiles created in profiles from Instyle's ecoustic® SC PET panels that are both acoustic and fire tested.
- ecoustic Sculpt™ also provides a simple and quick installation system for use with suspended ceiling grids of both 9/16th (15mm) and 15/16th (24mm) grid sizes, in 4ft x 2ft format**

Above: **Cosmos Baffles** make a dramatic visual statement, the Cosmos Baffle design lives within the space, allowing light and air to pass through while creating increased acoustic performance. Available as a kit of 9 fins, or can be custom cut to fit your needs, Cosmos is easy to install using the Unika Vaev suspension system and available in either 34 colorways of ecoustic® felt or 11 colorways of solid color core material.

Above Right: Warm up your ceiling look with the warmth of wood. Unika Vaev's **ecoustic® Timber Ceiling Blades** are an acoustic modular drop-ceiling tile, combining superior sound-absorption with the sophistication of PEFC-certified solid wood. **ecoustic® Timber Ceiling Blades** are designed to be compatible with 9/16" (15mm) or 15/16" (24mm) exposed tee grid systems in slim and standard profiles. Simple and functional, this system may be used with many lighting options and existing electrical or sprinkler services can be accommodated by field trimming the panels. Choice of 9 wood colorways available.

Designing with Unika Vaev is easy with CAD files available for the asking!
