

## **Focusing on scientific discovery and innovation in targeted therapy to save human lives:**

Cancer is the second most common cause of death in the US, exceeded only by heart disease. One of every four deaths in the United States is due to cancer. The American Cancer Society estimates that in 2022, about 1.9 million Americans were diagnosed with invasive cancer, and 609,360 americans died of this disease. Currently used cancer drugs such as chemotherapeutic agents and monoclonal antibodies have limitations due to their toxicities and are ineffective against tumors with drug resistance. Thus, there is an urgent need for more potent, targeted and safer cancer therapeutics.

Oncotherapy Solutions, an emerging biotechnology company is focused on the development of:

- 1. Drug conjugates carrying cytotoxic payloads to kill cancer cells.**
- 2. Conjugates carrying immunostimulant drugs to T cells and natural killer cells in order to enhance their anti-tumor activities.**
