CROWN ROYALE was developed in Oregon, based on selections for seedling vigour, rapid tillering, plant uniformity and freedom from leaf disease. It has been tested extensively throughout BC as OFI 93M and is a top performer in both the Northern and Southern areas.

CROWN ROYALE is a medium late maturing variety up to 8 days later than Potomac Orchardgrass as observed by researchers in Abbotsford. The later maturity makes it ideal for blending with alfalfa. Growth habit is upright with long narrow, blue green leaves.

Characteristics

CROWN ROYALE has the following traits that make it the preferred orchardgrass in British Columbia.

- Very Winter-hardy
- Rapid Re-Growth
- Very Leafy
- Highly Digestible
- Disease Resistant
- Professionally Bred
- Later Maturing
- Persistent
