Informed Consent for Trigger Point Injections / Intramuscular Stimulation (IMS)

Trigger point injections (TPI) is used to treat painful and tender areas of muscle. Normal muscle contracts and relaxes when it is active. A Trigger point is a discrete knot or tight, ropy band of muscle that forms when muscles fail to relax. The knot often can be felt under the skin and may twitch involuntarily when touched. In a trigger point injection a small needle is inserted into the trigger point and a local anesthetic (e.g. lidocaine, procaine, and bupivacaine) or anti-inflammatory is injected. IMS uses a fine and flexible needle to release shortened bands of muscle. No drugs are injected during IMS. Insertion of the needle inactivates the trigger point and thus alleviates pain. Additional treatment may be needed to achieve sustained relief.

The details of the procedure have been explained to me in terms I understand and alternative methods and their benefits and disadvantages have been explained to me. I understand and accept that there are complications, including the remote risk of death or serious disability that exists with any surgical procedure.

I understand and accept the most likely risks and complications of trigger point injections and IMS, which include but are not limited to:

-General Disappointment
-Needle Breakage
-Trauma to Nerves
-Vasovagal Reaction (fainting)
-Infection
-Numbness
-Pneumothorax with chest wall injections
-Soft tissue swelling,bruising,or hematoma formation

Any time a needle is used there is a risk of infection. Huntsville Pain Management uses new disposable sterile needles and infection is rare.

I understand and accept the anticipated outcomes:

-Increased circulation to the muscles
- Increased pain threshold at the trigger point
-Pain reductions
-Temporary increased muscle spasm
-Increased exercise tolerance
-Increased range of passive and active motion
- Multiple sessions necessary
- Temporary injection and post-injection pain

I have informed the physician of all my known allergies. I have informed the doctor of all medications I am currently taking, including prescription drugs, over the counter remedies, herbal therapies and supplements, aspirin and any other recreational drug or alcohol use. I have been advised whether I should avoid taking any or all of these medications on the days surrounding the procedure. I have informed practitioners about conditions such as pregnancy, pacemakers, or the use of blood thinners prior to treatment.

I have been informed of what to expect in the post-injection period, including but not limited to: estimated recovery time, anticipated activity level and the possibility of additional procedures. The physician has answered all of my questions regarding this procedure. **I certify that I have read and understand this treatment agreement prior to my signature.**

I authorize and direct Dr. James Thacker, with associates or assistants of his choice, to perform the procedure of trigger point injections and Intramuscular stimulation on _____(name). I further authorize the physician(s) and assistants to do any other procedure that in their judgment may be necessary or advisable should unforeseen circumstances arise during the procedure.
