# Hybrid Booster

**Description**

Hybrid Booster is a high quality blend of dimer and trimer fatty acids that helps improve rheological and suspension characteristics of invert emulsion fluids. It can help increase low end rheology while maintaining normal mud rheology and all the fluid properties.

**Applications**

- Helps increase low shear rheological properties.
- Improves cutting transport in highly deviated and horizontal wellbores.
- Helps reduce barite sag in highly deviated wellbores.

**Typical Properties**

- Appearance: Amber liquid
- Specific gravity @ 25°C: 0.89-0.91
- Flash point, °F: >200

**Usage**

Typically used at 1 to 2 lb/bbl rate.

**Safety & Handling**

Not classified as hazardous material. Please refer to current Safety Data Sheet which is available upon request.
