

Genetically Distant Varieties

Cherrie Ultra is genetically most different from these varieties: Nicholas Pringle, Panama, Alien Dawg, Puss Kush, Drivers Lane, Mendo D

Highlighted varieties are the most genetically divergent from the submitted sample (diamond marker). This 3D plot is representative of how the varieties are spaced in the Phyllos Galaxy. Genetically distant varieties may come from different subpopulations and have different cannabinoid profiles, flavor profiles, and growth characteristics. Crossing two distant varieties may generate offspring with interesting and novel phenotypes.
