

How to Buy Mammoth with Phantom + Pump.fun (Step-by-Step)

1) Install Phantom

- **Get Phantom** (browser extension on desktop or the mobile app).
- Create a new wallet → **save your Secret Recovery Phrase** on paper (offline). Don't screenshot it, don't share it, and don't store it in email/notes.
- Set a strong password and enable Face/Touch ID on mobile.

You don't need a "Pump account." Pump.fun connects directly to your wallet.

2) Fund Your Wallet (Gas + Spend)

- Add a small amount of the **base token** for fees (on Solana, that's **SOL**).
- Easiest options:
 - Buy within Phantom, or
 - Send from an exchange to your Phantom address (double-check the **network**).
- Keep a little extra for network fees so transactions don't fail.

Quick rule: have **a few dollars of SOL** available before you buy.

3) Open the Official Mammoth Pump Page

- Use **your official Mammoth link** only (paste your link here).
 - Double-check you're on the right token page: name, ticker, and **contract address** match your announcement.
 - Avoid look-alike pages.
-

4) Connect Wallet

- Click **Connect Wallet** → choose **Phantom** → approve the connection.
 - Make sure Phantom shows the **correct network** (e.g., Solana for SPL Mammoth).
-

5) Click BUY (Even if the Button Says “BUY DOGE”)

- Enter how much you want to spend (you’ll spend the **base token** and receive **Mammoth**).
 - **About the “BUY DOGE” label:**
 - The button is labeling the **spend token**, not the token you’re receiving.
 - So if it shows **BUY DOGE**, that means you’re paying with DOGE (or the UI is using DOGE as the spend label) **but you still receive Mammoth**.
 - On Solana you’ll often see “Buy” using **SOL**. Same idea—label = **what you pay with**.
 - If there’s a slippage field, leave default unless the market is moving fast (you can bump it slightly if you see repeated failures).
-

6) Approve in Phantom

- Phantom will pop up with the transaction details (spend token, network fee).
 - Review → **Approve**.
 - Wait a few seconds for confirmation. If it fails, see troubleshooting below.
-

7) View Mammoth in Your Wallet

- You’ll see your new **Mammoth** balance on the Pump page and in Phantom.
 - If it doesn’t auto-show in Phantom:
 - Go to **Import / Manage tokens** → **Paste Mammoth’s contract address** → Add/Import.
 - Refresh Phantom; the balance should appear.
-

Troubleshooting & Tips

- **Not enough gas:** Add a bit more of the base token (e.g., SOL) for fees.
 - **“BUY DOGE” won’t submit in Phantom:** If Phantom doesn’t support that spend token on the network you’re on, simply **swap/bridge into the supported base token** (e.g., SOL) and retry on the Mammoth page.
 - **Repeated “transaction failed” or “slippage too low”:** Increase slippage slightly, or try again with a smaller amount.
 - **Wrong token page?:** Always verify the **contract address** exactly matches your official announcement.
 - **Scam check:** Never message anyone your seed phrase; admins/devs will **never** ask for it.
 - **Receipts:** Click the transaction in Phantom to view it on the block explorer if you want proof/links.
-

Copy Block for Your Site (short version)

1. Install **Phantom** & save your Secret Phrase.
2. Fund with the base token (e.g., **SOL**) for fees.
3. Open our **official Mammoth Pump** page and **connect Phantom**.
4. Click **BUY**. If it says **BUY DOGE**, that’s just the **spend token label**—you still receive **Mammoth**.
5. Approve in Phantom.
6. View **Mammoth** in your wallet (import by contract if needed).
