Social Network - Do's and Don'ts

- Only establish and maintain connections with people you know and trust. Review your connections often.
- Assume that ANYONE can see any information about your activities, personal life, or professional life that you post and share.
- Ensure that your family takes similar precautions with their accounts; their privacy and sharing settings can expose your personal data.
- Avoid posting or tagging images of you or your family that clearly show your face. Select pictures taken at a distance, at an angle, or otherwise concealed. Never post Smartphone photos and don't use your face as a profile photo, instead, use cartoons or avatars.
- Use secure browser settings when possible and monitor your browsing history to ensure that you recognize all access points.

Facebook Mobile Overview

As of January 2015, Facebook Mobile hosts 745 million daily mobile active users who accounts for over 60% of all mobile posts published to any online social networking service. Though privacy can still be achieved, mobile users place their personal identity data at a greater risk when compared to users logging in via desktop computer. This is in large part due to the fact that mobile devices provide Facebook with a means to access additional location information, contact lists, photos, and other forms of personal data. Use the following recommendations to best protect yourself against oversharing.

Facebook Mobile Settings

Facebook Mobile's general security settings closely resemble those of Facebook's desktop application. Click **More** on the Facebook banner and select **Settings**. From there, navigate through the **Security, Privacy, Timeline and Tagging**, and **Locations** tabs to apply the settings shown below.

The image displays four screenshots of the Facebook Mobile app's settings menu. The first screenshot shows 'Security Settings' with options for 'Your Active Sessions' and 'Your Recognized Devices'. A red arrow points to the 'Other devices' section, specifically 'Chrome on Windows', with a red box containing the text: 'Review active sessions and devices to spot unauthorized activity'. The second screenshot shows 'How You Connect' settings, including 'Who can see my stuff?' and 'Who can look me up?'. The third screenshot shows 'Timeline and Tagging' settings, including 'Who can add things to my timeline?' and 'Who can see things on my timeline?'. A red arrow points to the 'Location Settings' section, specifically 'Location History', with a red box containing the text: 'Disable Location History to prevent Facebook from logging your precise location at all times'. The fourth screenshot shows 'Location Settings' with a red arrow pointing to the 'Location History' toggle switch, which is currently turned off.

iPhone Settings

The iPhone's security settings can help to further protect your personal data while you use the Facebook Mobile App. From the iPhone's **Settings** icon, select **Privacy** and navigate through the **Location Services**, **Photos**, and **Facebook** tabs to disable all of the permissions, as seen below.

The image displays three screenshots of an iPhone's settings menu. The first screenshot shows the 'Privacy' section with 'Location Services' turned on. A red arrow points to the 'Location Services' toggle. The second screenshot shows the 'Privacy' section with 'Photos' turned on. A red arrow points to the 'Photos' toggle. The third screenshot shows the 'Facebook' settings section with 'ALLOW THESE APPS TO USE YOUR ACCOUNT' turned on. A red arrow points to the 'Facebook' toggle.

Android Settings

Android phones can be configured to protect your personal data while you access the Facebook Mobile App. Access the phone's general **Settings** feature and navigate through the **Location Access** and **Apps** tabs to limit the amount of data that Facebook can take from your device.

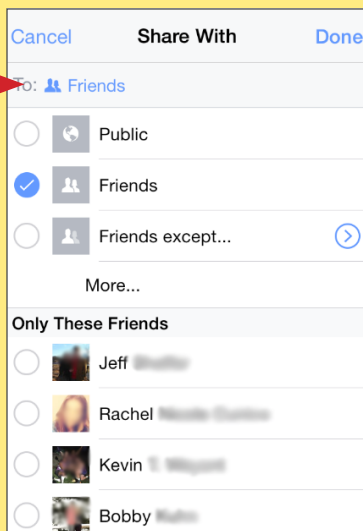

The image displays two screenshots of an Android phone's settings menu. The first screenshot shows the 'Settings' menu with 'Location access' selected. A red arrow points to the 'Location access' toggle, which is currently turned off. The second screenshot shows the 'App info' screen for the Facebook app. A red arrow points to the 'Permissions' section, which lists 'read your text messages (SMS or MMS)' and 'take pictures and videos'. A red box contains the text: 'Review the permissions Facebook requires access to once the mobile app is downloaded'.

Posting to Facebook

Facebook Mobile allows you to post new statuses, upload photos, or check-in to locations using the **Update Status** prompt. The icons highlighted on the update prompt, are intended to be shortcuts for adding further information about you to each post. Follow the guidelines outlined in this section to prevent oversharing your information and to maximize your security. Remember, it is always best to limit the amount of personal information shared online.

Selecting Your Audience

With every post, Facebook Mobile allows you to select the audience through the **Share With** prompt. For maximum privacy, select individual friends with whom you would like to share your post with. Never, make your posts available to the public.

Add Photos

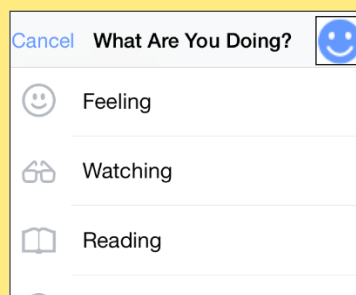

Avoid posting photos to timelines. These photos can often be viewed from your contacts' profile pages and can be saved without your knowledge or consent.

Tag Friends

Tagging friends in individual posts extends the reach of your profile and your contacts' profiles. Limit the number of tags you post to your Facebook entries.

What Are You Doing?

This feature does not pose an immediate threat to your privacy. However, Facebook likely uses this information to push targeted ads to you based on your activities.

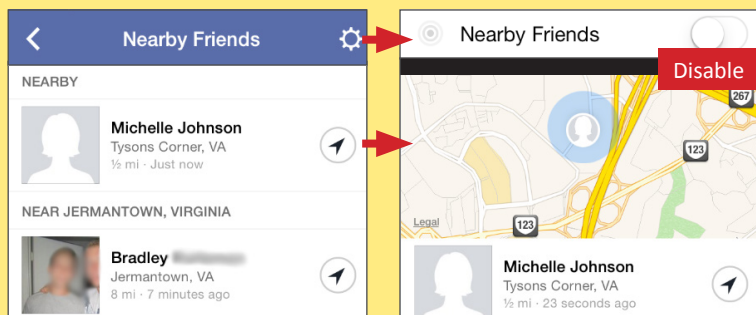

Add Location

Never disclose your location within a Facebook posting. Doing so allows Facebook to keep records on your whereabouts and allows others to see when you are away from home.

Nearby Friends

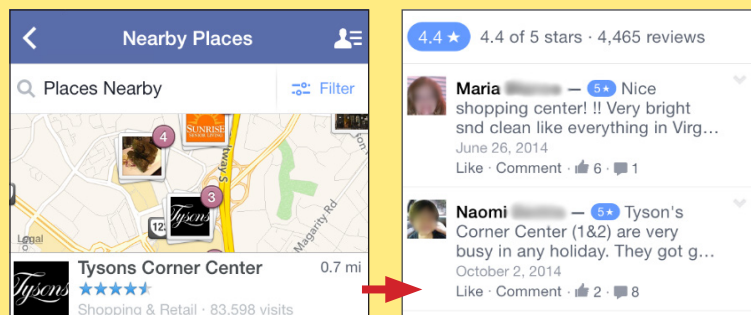

Nearby Friends is a feature that allows you to share your location with friends. When activated, this feature routinely broadcasts your approximate location to your friends. You also have the option to allow certain users to see your precise location for set periods of time.

When this feature is enabled, Facebook builds a history of your precise location. You can view and manage this information from the **Activity Log**. In general, avoid giving Facebook permission to track your location.

Nearby Places

Nearby Places is a feature that uses your GPS location to display local venues. When activated, the feature displays the distance to and ratings from other users about the destination. When a venue is selected, individual reviews appear with links to the posters' profiles. Don't post on these public threads.

To use this feature, you must have **Location History** enabled. This feature permits Facebook to track your precise location, even when the app is not in use. Avoid giving Facebook permission to track your location.
