# 100% Biodegradable

## 6 Pack Rings

### E6PR Facts

## JUST THE BEGINNING OF A MOVEMENT TO RID THE PACKAGING INDUSTRY OF PLASTIC

#### WHAT IS E6PR?

Designed to replace plastic six-pack rings, E6PRs are 100% biodegradable, compostable, plastic-free and the first real environmentally friendly alternative to the current plastic packaging solutions. The idea for E6PR was inspired by a desire to address the issue of plastic waste and its devastating effect on the environment and wildlife.

#### WHAT IS THE E6PR MADE OF?

E6Pr is made of a proprietary mix of plant fibers and by-product waste from the beer making process as well as other compostable materials.

#### WHAT ARE THE BENEFITS OF THE E6PR?

The E6PR is meant to be a viable solution to address the fact that thousands of animals are dying from ingesting or being harmed by plastic. E6PRs are safe for wildlife to ingest and expel. The 100% natural, biodegradable and compostable properties of the E6PR prevent animal from getting trapped in it.

While completely "animal safe" all E6PR products are also structurally sound for the purposes of customary packaging and can last years in storage within a standard warehouse environment.

The E6PR provides brewing and beverage companies an eco-friendly packaging solution that is environmentally responsible and taps into the growing consumer demand for sustainable products

#### HOW LONG DOES IT TAKE FOR THE E6PR TO DEGRADE OR COMPOST?

Depending on the ecosystem, it may take the E6PR up to a few months to fully degrade or compost. The disintegration of E6PRs in the ocean and on land are contingent on certain factors such as movement, salinity, temperature, humidity, soil composition, etc.

#### CAN I EAT THE E6PR?

While its materials are non-harmful in case of ingestion, the product is not intended nor recommended for human or animal. During storage and handling, the product is in contact with environments which we cannot control, it may be exposed to contamination and or hazardous elements. In case of accidental ingestion, please report any stomach aches, nausea, or ailment to a physician.

#### DOES THE E6PR HOLD ANY CERTIFICATIONS?

All products currently used in E6PRs hold an "OK Compost" Certificate by Vincotte Labs. The company plans to obtain additional compostable and biodegradable certifications, including the BPI Certificate. (the most accepted compostable certificate in the U.S.)
