

SAV-TY™

THE FUTURE OF
BEVERAGE CAN TOPS

Introducing **Sav-Ty™**,
a game-changing, resealable
can top designed to revolutionize
beverage packaging.

This innovative top offers an
**ergonomic, consumer-friendly
design** with a smooth pour and
easy-to-use functionality.
To open, simply flip up the tab,
twist the cap 90 degrees, and
enjoy your drink. When you're
done, twist it back to reseal.

Sav-Ty™ is **pressure-resistant, leakproof, and perfect for carbonated beverages**, meeting international standards through extensive prototype testing. It's ideal for ready-to-drink cocktails, cold brew coffee, and CBD-infused drinks, while also accommodating hot-filled, nitrogen-dosed, and pasteurized beverages.

What sets Sav-Ty™ apart is its **versatility and sustainability**. The screw cap, made from lightweight polypropylene, weighs just **3 grams**, making it lighter than current resealable can ends on the market. It includes a lift-up tab with tamper-evident markers and can be tethered to an anti-rotating support to comply with European beverage regulations.

Additionally, Sav-Ty™ features an **integrated soft seal system**, allowing it to fit various dispensing fittings. These fittings can be reused, helping reduce the need for single-use plastics. With endless possibilities, Sav-Ty™ is ready to inspire the next generation of sustainable beverage packaging.
