P-F350 (PETROCHEM – LOW TO MEDIUM TEMPERATURE FLUID-LOSS POWDER)

TECHNICAL DATA

P-F350 is a pre-dispersed non-retarding fluid-loss additive for use in low to medium temperature cement slurries < 350°F, in low or medium density slurries mixed with fresh to saturated salt water with early compressive strength.

P-F350 can be pre-dissolved in the mix water or dry blended in the cement. An example of P-F350 mixed with an API class H cement at a concentration of ~0.4% BWOC P-F350, plus 0.2% BWOC Dispersant, plus 4.33 Gals/Sk. mix water, at a slurry weight of 16.4 PPG, and a slurry yield of 1.07 cuft.sk. @ 160°F, with a fluid-loss of ~200 ml/30 minutes.
