

WHAT HEIGHT WAVEPRO DO I NEED?

Measurement
Example

$$11 \frac{1}{4} + 1 \frac{1}{2} = 12 \frac{3}{4}$$

When using a 2 3/8" or 2 7/8" TOP CAP remove seat and measure the length from the top of the Post to the floor and Add 1-1 1/2".

When using a Top Plate measure the current pedestal height from the boat floor to the seat bottom as shown above and Add 1-1 1/2" to the measurement for maximum comfort.

Use number code for the Base adapter (yellow) and number code (green) for the Seat Cap on HEIGHT GUIDE. Select the combined height that matches closest to your measurement with 1- 1 1/2" added. The Red column will indicate which WAVEPRO to select. Per example 12" would be closest.

Once you have installed the WAVEPRO adjust the air pressure so the WAVEPRO compresses 1-1 1/2" when seated for maximum comfort.

STATIONARY WAVEPRO 2.0

Part Number	WAVEPRO
100-9871-200	10"
101-2471-200	12 1/2"
