**Informational Open House: Upcoming Contracting Opportunities – King County Wastewater Treatment Division**

King County Wastewater Treatment Division (WTD) is hosting a virtual Informational Open House for interested firms to learn about upcoming projects and events. To encourage early teaming arrangements, we hope interested firms attend. For additional event details, visit WTD's Upcoming Contract Opportunities page.

**Event Date/Time**

**Tuesday, November 10, 2026, at 11:00 AM (PST)**

Duration: Approx. 1 hour

MS Teams Meeting Link (Registration is required): Register HERE

Registration Link: https://tinyurl.com/WTDOpenHouse-11102026

Once registered, you will receive an email confirmation that will include the meeting link with the option to save a meeting reminder on your calendar.

WTD will provide schedule updates on a number of upcoming construction, consulting, and work order contracts, highlight several upcoming projects, and

provide other updates. A brief description of some of the projects presenting at this open house are below:

**West Point Weight Scale Replacement:** Aspects of this project include replacing both truck loading bay weight scales with concrete deck scales and a coating system. As well as demolish existing truck scale system, install new load cells, wiring, C3 piping, new concrete scale deck, and associated commissioning. The project will be completed in phases, one for each scale.

**Sammamish Plateau Diversion:** This project will address regional conveyance system capacity needs by diverting flows out of the South Lake Sammamish Planning Area north. Diverting flows northward will alleviate capacity needs at several King County conveyance facilities.

**Auburn Green River Siphon:** This project will rehabilitate the siphons using a two-phase approach. The upcoming second phase will focus on internal rehabilitation using a hot-water inverted cured-in-place pipe (CIPP) liner for all three siphon barrels. An internal diversion system will be employed during the work. The project also includes replacing the riser sections, cones, and covers at both the inlet and outlet structures, followed by backfilling to restore the berm to Water and Land Resource Division (WLRD) standards.

---

**About King County Wastewater Treatment Division**

The King County Wastewater Treatment Division protects public health and the environment by collecting and cleaning wastewater while recovering valuable resources for a thriving Puget Sound region. We provide services to 18 cities, 15 local sewer districts, the Muckleshoot Indian Tribe, and nearly 2 million people across a 424-square-mile area in King, Snohomish, and Pierce counties.
