Services
Echocardiogram

Clinical Findings

First Available Appointment ✓

Case History

Presented for cardiac screening. No unusual coughing, sneezing, vomiting or diarrhea. No polyuria/polydipsia. Appetite and activity level normal.

Current Medications/Doses

None

Lab Tests

None

We use treats as part of our appointments. Does this pet have food allergies? No

Do you think this patient will require anti-anxiety medications/sedation? No

Physical Exam

Physical Examination

Heart Rate 172

Resp. Rate 48

Heart Rhythm Regular

Pulse Quality Normal

Mucous Membranes Pink, Moist

CRT

Jugular Distension None

Jugular Pulsation None

Resp. Character Normal

Cardiac Auscultation

No murmur or gallop was appreciated during this examination.

Thoracic Auscultation

Within normal limits in all regions.

Additional Findings

A temperature was not performed to minimize stress prior to echocardiogram.

Body condition score: 5/9

Fear, anxiety, stress (FAS) score: 3/5

EENT (eyes, ears, nose, throat): Pupils round and responsive, external ears normal, no nasal discharge noted. A complete oral examination was not performed to minimize stress prior to echocardiogram.

Peripheral lymph nodes: No lymph node enlargement was noted.

Abdominal palpation: Soft, non-painful. No organomegaly or masses were appreciated

Urogenital: No abnormalities were noted. A rectal examination was not performed to minimize stress prior to echocardiogram.

Musculoskeletal/neurological: Normal gait and mentation

Integument: No skin abnormalities were noted.

Echocardiogram Exam

Echocardiogram

IVSd	4.7 mm	Normal: 3 - 5.5
LVIDd	19.2 mm	Normal: 10.8 - 21.4
PWd	4.3 mm	Normal: 2.5 - 5.5
LVIDs	9.3 mm	Normal: 4 - 11.2
FS%	52 %	Normal: 35 - 67
Ao	11.7 mm	
LA	13.3 mm	
LA:Ao	1.14	

Echo Findings

Image quality was good. The left ventricular wall thickness measurements were normal. Systolic function was normal. No valvular abnormalities were noted. The left atrial diameter was normal.

Doppler Measurements

LVOT	0.90
RVOT	0.82

Doppler Findings

Color Doppler examination showed no abnormal blood flow.

Pulsed wave Doppler analysis showed normal ventricular outflow tract velocities and wave form. Mitral valve inflow analysis showed E:A wave summation.

Assessment

Diagnosis

Structurally normal heart.

Recommendations

Medication

No cardiac therapy is needed at this time.

Recheck Appointments

This is a finding that does not require any follow up unless signs of heart disease are seen in the future or for continued screening.

Anesthesia Recommendations

There is no cardiac contraindication to anesthesia or fluid therapy at this time.

Thank you for entrusting me with Balkan's care!

Trey Schutrumpf, DVM, DACVIM (Cardiology)
