### CVCC-2020-000982 Patient: Rosa Schlosser

Feline | Maine Coon | 11 months | Female | 10.25 lbs | 503-297-2218

Scheduled Time: 2020-04-14 18:00 Submitted: 2020-04-14 15:22

### Admin Details

### Services

Echocardiogram

## Clinical Findings

# First Available Appointment

Case History

Presented for cardiac screening prior to breeding. No unusual coughing, sneezing, vomiting or diarrhea. No polyuria/polydipsia. Appetite and activity level normal.

### **Current Medications/Doses**

None

### Lab Tests

None

## Echocardiogram Exam

Echocardiogram

IVSd	4.5 mm	Normal: 3 - 5.
LVIDd	19.9 mm	Normal: 10.8
PWd	4.9 mm	Normal: 2.5 -
LVIDs	9.3 mm	Normal: 4 - 11
FS%	53 %	Normal: 35 - 6
Ao	10.8 mm	
LA	12.8 mm	
LA:Ao	1.19	

### Echo Findings

Image quality was good. The left ventricular wall thickness measurements were normal. Systolic function was normal. The left atrial diameter was normal.

Doppler Measurements

Page 1 of 2

Patient: Rosa (Schlosser) Printed: 2020-04-14

### LVOT

RVOT

### **Doppler Findings**

Color Doppler examination showed mild tricuspid valve regurgitation. Pulsed wave Doppler analysis showed normal ventricular outflow tract velocities and wave forms. Mitral valve inflow analysis showed E:A wave summation.

### Assessment

### Diagnosis

Structurally normal heart The tricuspid valve regurgitation is considered a variation of normal.

Based on this there is no cardiac contraindication to using Rosa in a breeding program.

### Recommendations

### Medication

No cardiac therapy is needed at this time.

### **Recheck Appointments**

If continued screening is desired a yearly echocardiogram is recommended.

#### Anesthesia Recommendations

There is no cardiac contraindication to anesthesia or fluid therapy at this time.

Thank you for entrusting me with Rosa's care!

Trey Schutrumpf, DVM, DACVIM (Cardiology)
