Personalized Card Issuing Series

- Customizable Card Printing Options
- Biometric Authentication
- Configurable Hardware
- Bank Card Printing and Embossing

Our smart card printers are intelligent terminals designed to expedite the card issuance process. This solution can be integrated with bank card application systems to provide customers with a smooth experience when issuing new cards immediately. Because these solutions can both print and emboss characters, banks can decide to use these smart terminals for all kinds of cards without having to worry about manual processes. Allow customers to fully customize their cards so they can keep coming back for more.

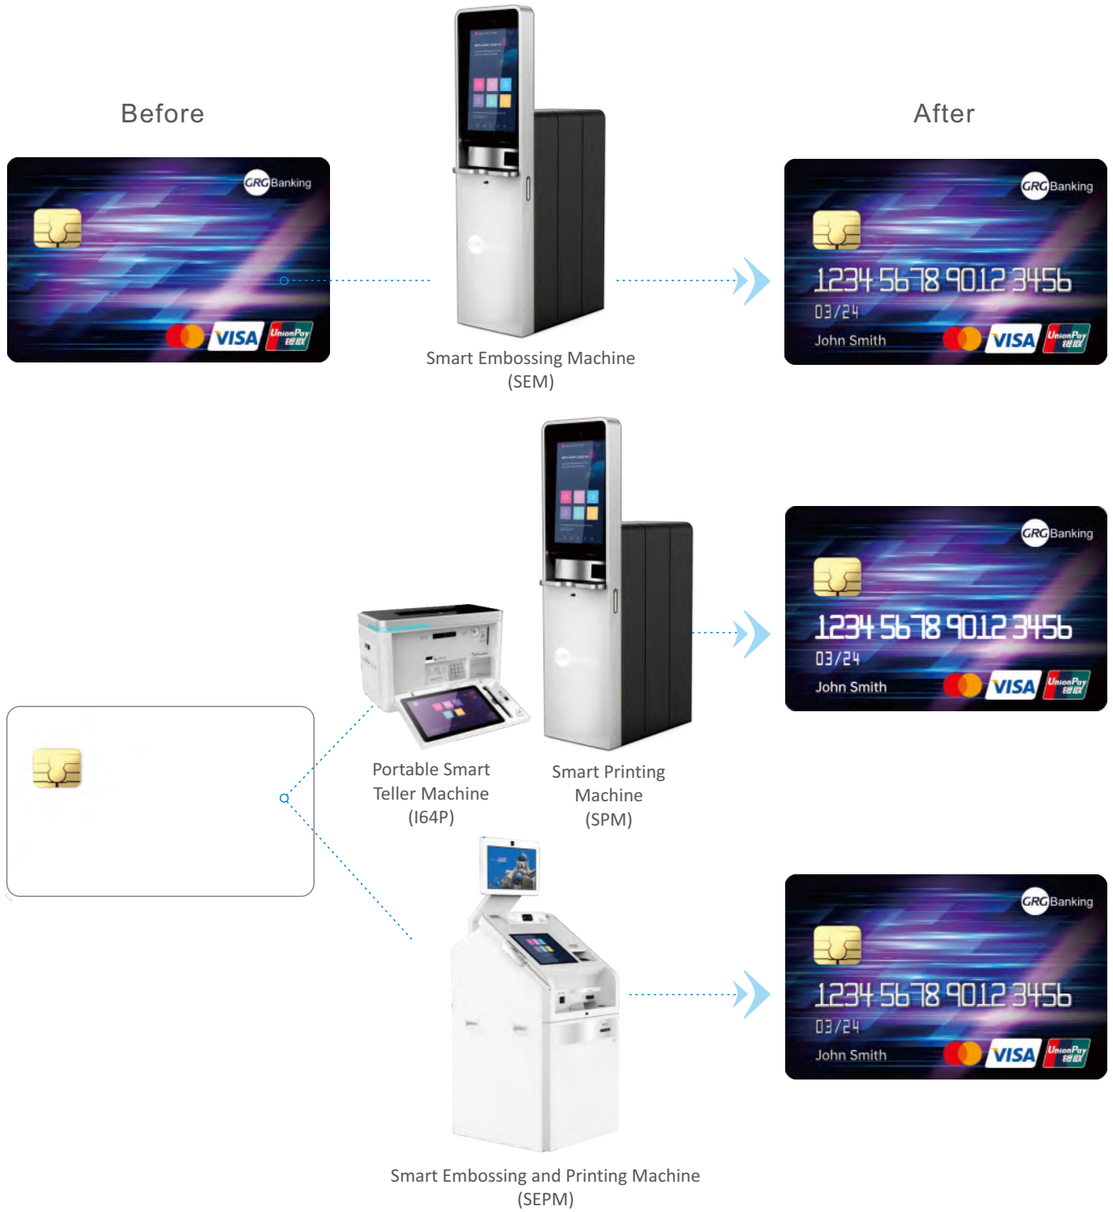

Smart Card Printing and Embossing

Features

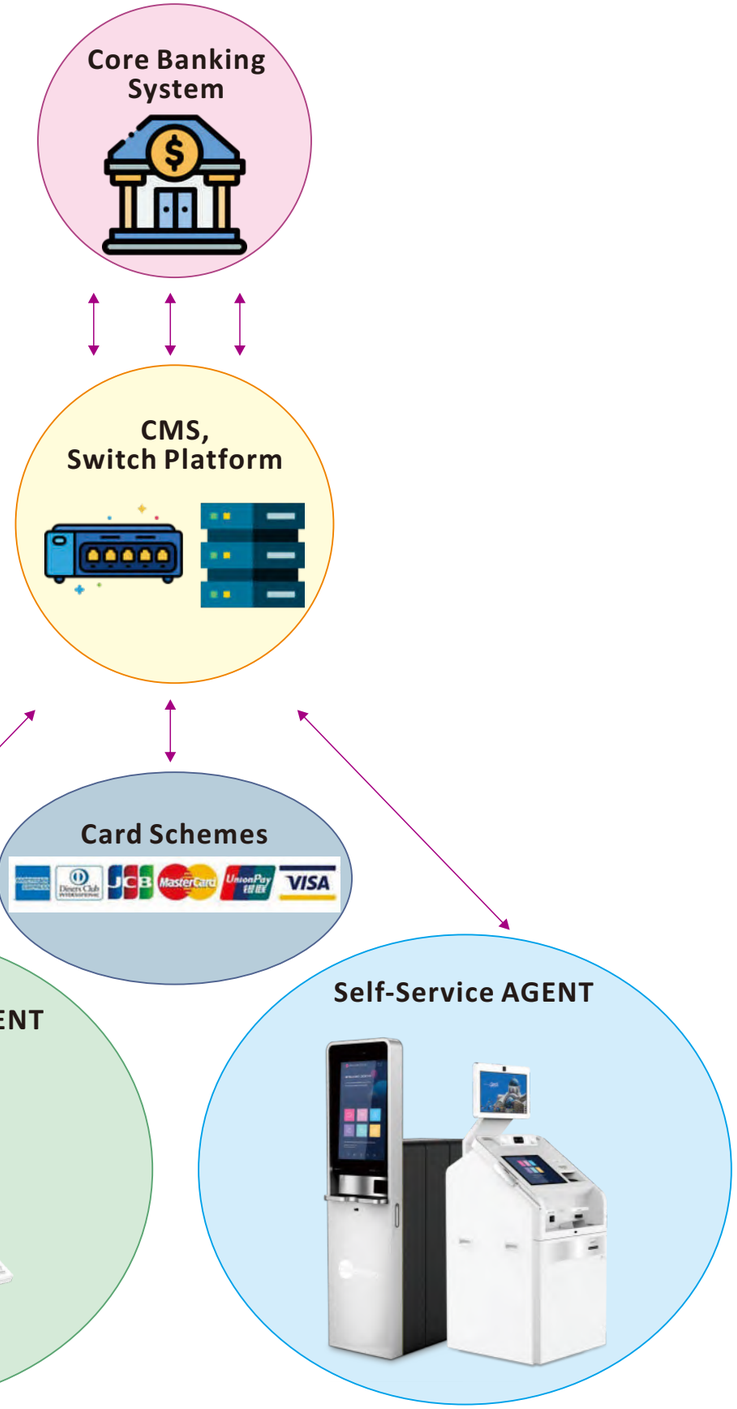

Assisted Self-Service: Customers can apply for cards online or through other application terminals. Once approved, KYC can be done with our self-service machines for customers to print their new cards immediately.

Increased customer throughput: Gone are the days where customers must wait several days to receive their new bank cards. Instead, the process can be streamlined at the bank branch reducing the need for counter services.

Cost effective solution: Banks no longer must seek 3rd party services to pre-print bank cards. Our card printing solutions can support printing and embossing on blank or pre-printed cards. Quickly increase credit and debit card applications.

Card Management System Integration

Provide a new or migrated card management system to speed up your card transactions as well as switching services needed to optimize your workflows.

Develop software agents to directly communicate to your card management system with your portable card issuing machines.

Develop software agents to directly communicate to your card management system with your self-service kiosk card issuing machines.
