

KC TRUCK & TRAILER REPAIR

Volume 1 / Issue 1

A NEW LOOK

We are currently in the middle of a full rehab of an Ammonia R grade trailer for a customer. We look forward to revealing the finish product next month.

Joey installing a pair of new maxi chambers on rehab Ammonia tank.

KC TRUCK & TRAILER REPAIR LLC

“Let us get you back up and running.”

Moving Forward

Keeping a fleet moving takes a lot of time and effort including but not limited to remembering due dates, scheduling appointments, etc... This is typically done in house, by individual who is over stressed. With some vehicle maintenance due every 90 days, while others are due every year. It can be over-whelming to remember what each individual truck or trailer needs are.

This is where KC Truck and Trailer Repair stands out to its competitors. We use a software developed by Fullbay Software, that allows us to set up our customers with their own portal. In this portal view, our customers will be able to see which pieces of equipment are due for which services. Also in the portal, customers are able to schedule services and arrange delivery/pickup of equipment.

Waiting for equipment to be ready becomes a logistical nightmare for any individual/company. With the integration of the Fullbay Software, our customers will get up to date information about where their equipment is in the service process. Communication between our shop and our customers is one of our fundamental values. We believe this software will help customers gain trust in our shop.

“Communication with our customers, allows their trust in us to grow”

DIAGNOSTIC

As technology continues to grow it is no shock that it has made it's way into the trucking industry. With trucks becoming more like luxury cars, and less like tractors, it is important when considering a shop to make sure they have the latest in technology in diagnostic software. Our shop is equipped with the latest diagnostic software from JPRO. This software allows us to dianose anything from ABS issues to every engine code in between. This fast, portal diagnostic equipment allows our techncian to perform many dianostics on the side of the road. Let's face it, that is where most break downs happen.
