# Ctrl-Alt-Destruct

A satirical card game about Cybersecurity

## RTFM

A satirical card game for IT pros, hackers, and caffeine-fueled warriors.

What You Need:

- 3+ players (no, your cat doesn't count)
- 100 Red Cards (Prompts)
- 304 Black Cards (Answers)
- One unresolved ticket and a drink

"Ctrl-Alt-Destruct contains 404 cards. Good luck finding the right one."

Setup:

1. Everyone draws 10 black cards.
2. The last player who clicked a phishing link is the first Root User (aka The Blue Screen Prophet).
3. Choose a target score (say, 5)
4. Shuffle the red cards like you shuffle blame.

How to Play:

1. The Root User draws a Red Card and reads it aloud in their best robot overlord voice.
2. Everyone then submits 1 Black card(s) face down to the Root User.
3. The Root User reads all Black cards aloud (dramatic re-reads encouraged).
4. They pick the funniest or most horrifying one.
5. That user earns 1 point—and a brief moment of dignity.

Next Round:

- Draw back to 10 cards.
- Rotate the Root User left (or to the most chaotic player-your call).

Optional Chaos:
- Trust no one's humor. Assume everything is malicious.
- Stack Overflow: Tie? Settle it with a roast battle. Last one standing wins the point.

Win Condition:
The first player to reach the target score wins or whoever single-handedly sets the data center on fire (metaphorically… we hope).

*Legal Nonsense:*
This is NOT valid cybersecurity training. Any resemblance to real breaches is entirely on purpose.

This game is not sandboxed—play at your own risk.
