IRVAP

- ALL treatments within the centre require veterinary consent in accordance with the Veterinary Surgeons Act 1966 and Exemptions Order 2015, no exceptions! We will only work with your vet's signed agreement, and we will provide them with treatment and progress reports at regular intervals.
- All dogs must be toileted before they arrive for treatment, and food withheld for at least two hours before and after any hydrotherapy appointments. Always allow access to fresh water.
- Please clean up after your dog outside and inside the centre, we understand accidents do happen and can provide poo bags if necessary. Accidents within the pool or treadmill will incur a £60 fee due to in impact on the next patients as we will have to close the pool/treadmill for cleaning.
- If a patient is particularly nervous, they may take multiple visits before treatment can commence. In these situations, a reduced fee will be charged. We want to make sure everyone is comfortable and happy in the environment before treatment.
- Toys can be used for encouragement, but we will not allow them to be retrieved off the water line due to the risk of secondary drowning. No jumping in off the side due to the same reasons, plus the risk of further injury!
- We suggest vaccination, flea, tick and worm treatments are all up to date. If this is not possible, please let us know in advance.
- Payment must be made at the time of treatment with either pay-as-you-go, or in advance in blocks of 10 sessions by card, cash or online banking.
- Cancellations need to be made at least 12 hours in advance or full payment will be charged.
- We require all visitors to use the hand sanitiser before entering the treatment areas.
- Ideally only one visitor with each patient, but if you are bringing children, they should always be supervised. Other family dogs should always kept on a lead and not cause a disruption to the patient having treatment.
- We reserve the right to cancel appointments at short notice with no charge to the client. This will only happen if there has been an accident in the pool, or a problem with power or water supply which will require us to stop treatments.
- Insurance companies will sometimes cover hydrotherapy and physiotherapy and we are happy to fill out insurance forms, but the referring vet will be required to sign. We cannot do direct claims to insurance companies, payment is required at the time of treatment for the insurance company to reimburse the client once the claim has been successful.
- All pets undergoing hydrotherapy will be given a shower before and after treatment with the option of a shampoo. We use our own shampoo unless you have one you want to bring with you. A blast dryer and towels are provided for drying, and you can purchase drying coats to keep your dog warm.
- We reserve the right to use a basket muzzle should the therapist assess the patient as necessary, but only with client consent.
- Our centre uses underwater cameras and other photography to monitor patient progress, assess treatment protocols and promote our business via our website. If you do not consent to this, please let us know at your first appointment.
- Brachycephalic breeds (short nosed), bitches in season, diabetic or epileptic patients and those with heart conditions will be individually assessed for their suitability for hydrotherapy.
- Wren Canine Hydrotherapy & Rehabilitation Centre does not accept any responsibility for any accidents or injury whilst on or outside the premises, please wear suitable footwear and observe safety advice.
- We will not see patients for hydrotherapy treatments with vomiting, diarrhoea, indwelling catheters, external fixator, open wounds, certain spinal conditions, and certain chemotherapy agents.
- If your pet has had any vomiting or diarrhoea, please ensure that 72 hours has passed from the last vomit or diarrhoea before coming for treatment.
- I agree to sharing my information with my veterinary practice in the form of progress reports.
- I agree to update my information as soon as possible should a new medical condition be diagnosed. This may affect treatment protocols which will have to be reassessed.
