

In the summer of 2017, I had the joy of embarking on a road trip across the lower 48 states with my two sons. As a single mom and educator, I traveled with my 4th and 5th-grade boys. To make the long hours of driving more enjoyable and offer enriching yet budget-friendly activities, we became members of the Da Vinci Science Center in Allentown, PA. Through the travel passport program, we had the opportunity to visit various centers across the country.

I recall the times when my boys would request something at every stop we made, and cost was a constant consideration. The desire to offer a cost-effective novelty inspired me to develop my Pocket Fidget Friends line.

We have been manufacturing and distributing our 3D printed Pocket Fidget Friends since 2023. Our packaging is completed by individuals with disabilities at CTC Manufacturing, a non-profit that has been providing job training and employment opportunities to adults with disabilities since 1971.
