

ANSI LOW FLOW HIGH HEAD
1196LF SERIES

CHEMICAL PROCESS PUMPS

ASME B73.1 STANDARD

QUALITY | COMMITMENT | ADAPTABILITY

HIGH ON **PERFORMANCE**
GREAT ON **RELIABILITY**

THE 1196 LF PROCESS PUMP IS DESIGNED TO OFFER LOW FLOW & HIGH PRESSURE APPLICATION IN INDUSTRIAL PROCESS APPLICATIONS.

Design Features

- Rotech LF 1196 circular (concentric volute) casing and open radial vane impeller are designed to eliminate hydraulic and mechanical problems at throttled low flow.
- **Circular Volute Casing**
Reduces radial loads during low flow condition. Mechanical seal and bearings life is longer. Fully machined discharge and volute provide maximum efficiency and precision control of hydraulics at low flow.
- **Rotech LF Impeller**
Multiple open radial vanes reduce vibrations pulsations, and vane stress Full shroud for superior vane strength when operating at extreme low flows. Balance holes reduce axial thrust, maximize stuffing box/seal chamber pressure for longer seal and bearing life.

Disadvantages of Throttled Typical end Suction Pump

- Resultant higher radial loads
- Higher shaft deflection
- Failure of Bearing & Mechanical seal before their life cycle
- Unscheduled shut down.
- Higher service cost

To overcome all these disadvantages 1196 LF Process Pump is designed to offer Low Flow with High pressure application in Process Industries.

■ Off Design Operation Range
■ Recommended Operation Range

Reduced radial loads for optimum reliability.

- Radial loads are reduced by as much as 75% compared to end suction expanding volute pumps at low flows. Bearing, mechanical seal and overall pump life are optimized.

Expanding Volute Pump

Rotech 1196 LF Concentric Volute Pump

ROTECH ANSI / ASME B73.1 PROCESS PUMP

Stuffing Box Covers / Sealing Options

- Standard Bore: Designed for packing & mechanical seal.
- Large Bore: Improved cooling & lubrication.
- Taper Bore: Lower seal face temperature, self-venting and draining, solid & vapours circulated away from seal face.

Standard Bore

Large Bore

Taper Bore

Material Options

- Ductile iron • Carbon steel • Stainless steel • Duplex SS • Alloy 20
- Hastelloy B & C • Nickel Alloys • Titanium and Any Other Special Alloys

Power Frame

- Bearing Frame: Ductile Iron Standard
Optional: Carbon Steel, 316SS.
- Internal surface cleaned, rust preventive applied, and enamel coated assuring internal casting cleanliness.

Component Seal

Single Cartridge Seal

Dual Cartridge Seal

Shaft and Shaft Kit Assembly

- 4140 Steel Shaft as a standard,
Optional: 316SS Sleeved, 316SS Solid Shaft, 2205, 2507, Alloy 20 or any other special alloys against request.

High Temperature Application

- Finned Cooler: Directly cools oil for lower bearing temperature. Requires minimum cooling water. Corrosion resistant construction. Recommended for temperature over 350°F (177°C)
- Jacketed Stuffing Box: Keep proper temperature control of sealing environment. Perfect for polymerizing liquids.
- Jacketed Casing: Ideal for heating or cooling applications.

Jacketed Casing

Jacketed SBC

Finned Cooler

Base Frame Options

1196LF Base Frame
Sheet Metal

1196 Drip Pan
Base Frame

Dynamic Sealing Option

Sealing problem eliminated, Maintenance cost minimized, Utility costs reduced, No requirement of external seal water.

ROTECH ANSI / ASME B73.1 PROCESS PUMP

Sealing Options & Stuffing Box Cover

- Various component & ANSI cartridge seal configurations
- Various API Sealing Flush Plans
- Leak protection with maximum heat dissipation, extended seal life and pump reliability

Casing

- Full line of corrosive resistant materials
- Self venting, centerline mounted discharge flange
- Precision serrated flange face finish for optimum gasket retention and sealing
- Flange Options:- Class 150# RF (Standard) and Class 300# RF (Optional)
- More casing thickness is provided as compared to ASME B73.1 specification for extended casing life.
- Back Pull out design for easy maintenance

Gasket

- Non-Asbestos Aramid Fibre
- PTFE, Glass filled Teflon
- Positive liquid sealing

Impeller

- Semi-open Impeller design for increasing abrasion, corrosion and solid wear resistance
- Solid handling capacity with ease in pumping fibrous material
- Back pump-out vanes reduces pressure on shaft seal
- Adjustment of clearance is easy when wear & tear takes place

Foot Mounted Casing

- Maximum casing stability and support for back pull out maintenance feature
- Reduced vibration

Casing Drain

- Casing drain port as standard
- Drain piping as optional

Adapter

- Standard Material: Ductile Iron
- Optional Material: Carbon Steel, 316SS (CF8M)

Breather Plug

- Large sized vent/fill cap for easy oil changes and elimination of contamination

Thrust Bearing

- Heavy duty double row standard
- Optional duplex angular contact thrust bearing

Labyrinth Oil Seal

- Labyrinth bearing isolators providing positive sealing environment preventing housing contamination

Externally Adjustable Impeller and Shaft System

- Simple & fast adjustment of impeller to front casing clearance without removal of pump from piping
- Restoration of factory efficiencies

Bearing Frame

- Large oil sump capacity for increased cooling
- Standard flinger disk design, with optional re-greasable, purge oil mist and pure oil mist lubrication
- Contoured internal slope for positive collection of metal contaminants by magnetic drain plug
- Optional 316SS Tube Finned Cooler for high process temperatures above 350° F to 700° F
- Internal surfaces cleaned, rust preventative applied, and enamel coated assuring internal casting cleanliness

Oil Level Sight Glass

- 1" sight glass located on each side of bearing housing for flexible viewing

Oil Sump Magnetic Drain Plug*

- Magnetic plug to maintain bearing frame cleanliness – Shaft and Sleeve and increased protection

Shaft and Sleeve

- Standard: 316SS Shaft sleeve with AISI 4140 Shaft
- Optional: Solid Shaft (MOC-AISI 4140, 316SS, A2205, A2507, Alloy 20, Monel, Nickel, Hastelloy B, C & G, Titanium) Sleeve Shaft (MOC- AISI 4140 and 316SS)
- Rigid heavy duty design for minimum shaft deflection at seal area and increased reliability

Note: (*) Not Illustrated

DELIVERY

Pumps / parts are strategically inventoried at various locations in North America, Asia for rush delivery in various material options.

PUMP SELECTOR PROGRAM

Access to end users and specifiers to select your pump application online at www.rotechpumps.com or Contact us for more help

HYDRAULIC PERFORMANCE COVERAGE

4 Pole Motor

Capacity up to 310 GPM (70 m³/h) | Head up to 225 feet (68 m) | Temperature to 700° F (371° C) Pressure up to 450 PSIG (3102 kPa)

2 Pole Motor

Capacity up to 580 GPM (132 m³/h) | Head up to 925 feet (282 m) | Temperature to 700° F (371° C)
Pressure up to 450 PSIG (3102 kPa)
