

## Smarter DV response. Stronger survivor outcomes.

**HART™ empowers your agency to conduct lethality risk assessments, instantly connect survivors with local services, and share critical data across the criminal and social justice systems — all from a single, CJIS-compliant platform.**

- 
**Lethality Risk Assessment — dynamic, conditional-logic forms that conform to your agency's protocols.**  
 Conduct LAP and custom DV risk assessments on scene. Mandatory fields and conditional logic ensure complete, standardized data collection every time.
- 
**Real-time survivor referrals — HART initiates the referral automatically, no manual follow-up required.**  
 The moment an assessment is completed, FRAS™ instantly notifies local DV service providers and all stakeholders with a need-to-know.
- 
**Coordinated Community Collaboration™ — unites law enforcement, DVSPs, DAs, and CPS in real time.**  
 Dynamic data sharing and automated alerts ensure every stakeholder with a need-to-know is notified immediately — without additional steps from the assessor.
- 
**Offline / Store-and-Forward — assessments completed anywhere, with or without signal.**  
 Data is stored locally and automatically syncs when connectivity is restored. No dropped assessments, no missed referrals.
- 
**Accessible on all devices — iOS, Android, mobile, tablet, or Mobile Digital Terminal (MDT).**  
 HART is fully customized to your agency's needs, workflows, and existing policies — configured to work the way your team already operates, on the devices they already use.

### County Connect™

Unites the criminal and social justice stakeholders through data sharing, multi-agency access, and real-time alerts.

#### HART™ Annual License

Pricing is based on agency size, contract terms, and deployment scope.

#### Contact Forseti for pricing
