Sample buddy letter for sleep apnea

Va sleep apnea buddy letter example. Sleep apnea va buddy letter from spouse example. Sleep apnea buddy statement example. Sleep apnea buddy letter example. How to write a buddy letter for sleep apnea.

A VA buddy letter, or lay statement, can be used to help support a veteran's claim and provide insight into how a veteran's condition affects their daily life. Continue reading to learn more about how to submit VA buddy letters and who can write them.

What is a VA Buddy Letter?VA buddy letters, also known as lay statements or lay evidence, are credible statements made in support of a claim for VA disability benefits. The statement can serve as a valuable piece of evidence in a veteran's disability claim. VA buddy statements are important because they can be used to fill in gaps of information missing from the veteran's treatment records or service records. They may also serve as a witness statement for an event, injury, or illness in service which can be used as corroboration.Buddy letters may provide clarification and better illustrate the veteran's current situation and how their disabilities impact their daily life. They can be used to help support various claims, such as those for service connection and increased ratings.Importance and Impact of a VA Buddy LetterLay statements are important largely because they are evidence, in the same way that medical documents are considered evidence. This means that the Board and VA must consider lay statements provided by the veteran and people who know the veteran in their determinations.Most importantly, the statement must be from someone deemed competent, meaning that it needs to come from someone with sufficient personal knowledge of the subject about which they are testifying. This could be someone who knows how the veteran's conditions affect them on a day-to-day basis or someone who witnessed a specific incident that the veteran experienced in service. As long as a qualified person submits the lay statement, it becomes evidence that VA is required to consider when adjudicating the veteran's claim.Regarding competency, there are certain things a veteran can and cannot say in relation to their claim. For example, the veteran cannot attribute a specific symptom to a specific medical diagnosis. Rather, a doctor must attribute the symptoms to the diagnosis.As long as the veteran, or the person writing a buddy statement on the veteran's behalf, is testifying to something that they have personal knowledge of, they can include that information in the buddy letter.What Should a Buddy Letter Include?As mentioned previously, buddy letters can speak to the impact of a physical or mental condition on the veteran's day-to-day life. They may also describe an injury, an event, or symptoms witnessed during service. Therefore, the content of the letter will depend on the veteran's specific claim or appeal, and what they are trying to prove to VA.For example, if a veteran is trying to corroborate an in-service stressor, such as an event or an injury, they may obtain a buddy statement from a fellow service member. The statement should then include information about why the individual has personal knowledge about the event, as well as specific details regarding the event.This may be a detailed description of what they witnessed if they were involved in the event or verification of when and where the injury or event occurred.If the statement is going to be more focused on the symptoms of a veteran's condition and has and their impact on the veteran's daily life, it may include information regarding how the veteran's condition affects them, what the person writing the statement witnessed, how the veteran has changed since service, and any other relevant details.How to Structure a VA Buddy LetterStrong buddy letters are generally divided into four parts which are structured in a particular order.Buddy letters should always include the name of the person writing the statement, their contact information, and their relationship to the veteran. If the person writing the statement served with the veteran, and they are corroborating an in-service stressor, it is also important to include the details of that in-service stressor in the statement. These details could include the unit and location assigned.Detailed DescriptionsThe statement should, of course, include details. If the statement is regarding an in-service stressor, it should describe when and where the stressor took place. If the statement is describing the veteran's current symptoms, those symptoms should be explained as well as possible. It should also note that the symptoms are ongoing.Veteran's SymptomsIf the person writing the statement has knowledge regarding the veteran's conditions or symptoms, it can be very pertinent to include. This could consist of details about how a veteran's personality changed after the in-service stressor, or how their disability has affected their ability to perform specific tasks. Any insight the person writing the statement can offer about how the veteran's conditions have impacted their life can be very useful in painting a more complete picture for VA.Signature and CertificationAll lay statements are required to be signed and dated in order to be considered by VA. In doing this, the person signing the statement acknowledges that the buddy letter is correct to the best of their knowledge. The signature serves as certification that the information has been provided to the best of the person's knowledge and belief.Who Can Write Buddy Letters?The question of who may write a buddy letter ultimately comes down to what a veteran is hoping to prove to VA. The information the veteran needs to establish will likely then determine who they ask to write a buddy statement.Importantly, the person writing the statement must have personal knowledge of the veteran or the veteran's service or conditions in order to be considered competent. The competent individual must also be at least 18 years old.If the buddy letter is written by a fellow service member, they may describe the in-service event based on their own experience. Below are some common examples of people who may write a lay statement for a veteran.Common Examples of Lay PersonsFellow servicememberSpouseFriendCo-WorkerAdult ChildParent of the veteranCaregiver to the veteranIn addition to the above-mentioned people, the veteran themselves may also compose a lay statement on their own behalf. Importantly, the veteran may submit more than one buddy statement in support of their case.VA does not require any specific form or format to submit a buddy letter or statement. Technically, a person could draft a Word document or write a handwritten letter and VA would be required to accept it. However, VA does have some forms that an individual who is providing a buddy letter can use.One of the forms that can be used to provide statements in Support of a Claim. The form includes sections for the veteran's identification information, the statement itself, and a declaration of intent where the person providing the statement will sign and date the form.In early 2021, this form was replaced with five other forms which have specified uses. Specifically, VA Form 21-10210, or Lay/Witness Statement, may be used to submit a formal statement in support of a veteran's VA disability benefits claim. Multiple statements may be submitted, and by multiple people, however, each statement should be submitted on a separate form.Quick Tips for a VA Buddy Letter1. Ensure that the buddy letter is from someone credible and competentIn order to ensure the VA accepts the statement as being from someone credible and competent, the person giving the statement should have first-hand knowledge of the veteran or the veteran's service. Essentially, this means that the person giving the statement should not lie or speak to anything about which they do not have personal knowledge.This also means that persons without the appropriate credentials or qualifications should not offer a medical opinion. Additionally, a statement can be deemed reliable if it is consistent with the records. For example, if a person is providing a statement regarding an in-service stressor, they may want to be sure their account of the incident reflects the records which exist regarding the stressor.Though easily overlooked, it is important to be sure to sign and date the lay statement prior to submission. This will indicate that the statement is true to the best of the author's knowledge. Following these steps will help to ensure that VA finds the statement credible.It may also be pertinent to include how the person has this personal knowledge. For example, if a spouse is writing the statement, they may wish to include how long they have been married or living together.3. Be conciseIncluding too much irrelevant information in a statement can confuse VA and dilute the evidence being provided. Being concise and detailed can help to ensure that VA understands the point which the lay person is trying to establish. Focusing on the specific facts and details of what is being reported may be useful to keep the statement succinct and avoid extraneous information.The person providing the statement should be sure to include their contact information, such as phone number, address, and email, in case VA needs to follow up with them. If VA needs clarification on anything included in the statement, they may then contact the person who provided it.Similarly, it is important to include the veteran's name in the statement. Often a layperson may use a nickname or a pet name to refer to the veteran which may not specifically identify about whom they are speaking. Therefore, the statement should be clear and use the veteran's full name.6. Certify the buddy letterIn the closing lines of the statement, the person writing the statement may wish to include wording to specify that they "certify that [their] statements are true and correct to the best of [their] knowledge and belief." This is another affirmation that the person providing the statement is attesting to their first-hand knowledge to the best that they can recall.Examples of VA Lay StatementsDisclaimer: These statements are examples only. They should not be submitted in support of any claim or appeal for VA disability benefits. This information is not legal advice. This information is made available for educational purposes only and to provide general information and a general understanding of how statements may be drafted. It is not a substitute for legal advice. By using this information, you understand that there is no attorney-client relationship created by you reading or using the information contained on this website or in this or that blog.Example of Lay Statement Written by a Family MemberAffidavit of Jane Smith, Jane Smith, hereby declare under penalty of perjury, pursuant to 28 U.S.C. § 1746(2), that the following is true and correct to the best of my knowledge.My brother John Smith served in the United States Army from February 12, 1983, to September 23, 1985. Before service, he was a happy person who enjoyed spending time with family and friends. He was an avid basketball player and loved being outside. He was the life of the party and always had people laughing.My brother would write letters to me while he was in service. His first few letters seemed like everything was going fine but then the tone changed. I could tell something was different so I asked if something had happened. He started to tell me that he felt like he was a target and was labeled a "pretty boy" by the others. In the spring of 1984, he wrote to me and told me that after a night of drinking with friends, he was sexually assaulted. He did not want to tell anyone besides me because he was embarrassed and scared of any potential retaliation. He explained that he felt like he was stripped of his manhood. He told me that he was still being bullied even after the assault and felt like he was trapped in his own personal hell. Eventually, he was in so much pain and just could not take it anymore, so he purposely went AWOL and was subsequently discharged.When my brother returned home, he was an entirely different person. He moved back in with our parents and rarely left his room. He did not see any of his old friends and never wanted to attend family gatherings. On the few occasions that he did leave the house, he was paranoid and constantly looking over his shoulder. He developed a temper and snapped at anyone who tried to help him. One time, he even got into a physical altercation with our Dad. He began drinking heavily and using cocaine to cope with his feelings. He became more violent and dangerous and he could not live with our parents anymore. Eventually, he became homeless.Many years later, he finally chose to seek help and face what happened to him. He was diagnosed with PTSD and joined a local support group. Even though he attends therapy and is trying to change his life for the better, he still isolates himself and does not like being in groups of people. He is still paranoid and on edge frequently. My brother is still trying to control his temper and he has lost several jobs because of it. He still seems depressed and ashamed of whatever happened to him so many years ago in service. Since leaving for service, my brother has never been the same.I hereby certify that the information I have given is true to the best of my knowledge and belief. Jane Smith DateExample of Lay Statement Written by the VeteranAffidavit of John Doe, John Doe, hereby declare under penalty of perjury, pursuant to 28 U.S.C. § 1746(2), that the following is true and correct to the best of my knowledge:I served honorably in the United States Army from August 15, 1968 to June 16, 1974. As a result of my time in service, I am currently service-connected for sarcoidosis; diabetes mellitus type II; bilateral lower extremity peripheral neuropathy; and bilateral iridocyclitis. Due to the combination of my service-connected conditions, I have been unable to secure and follow substantially gainful employment since I last worked in 2010.I last worked full-time in 2010 as a fuel truck driver. This job consisted of me driving a fuel truck and loading and offloading fuel in different locations. I was required to load fuel into the tanker I drove and then deliver it to locations. I had to usually stop back at the fuel yard in order to fill up again between trips. Typically, I made two trips in a day, sometimes three. Each one of the trips lasted at least two hours each way, sometimes up to four hours each way. I had to do out-of-state trips at least once a month, and these drives would usually start early in the morning and go until very late at night.My service-connected sarcoidosis caused significant limitations on my ability to work when I was employed as a truck driver. I often experienced severe chest pains and shortness of breath, even while I was just sitting down and driving in my truck. I usually had to pull over at truck stops when I was on the road and take about a half-hour break so I could regain my composure and try to slow my heart rate down. I had to do this up to five times for every trip I made. This prevented me from completing my deliveries on time and I was unable to be as productive as other drivers. When I would get out of my truck at a rest stop, I could not stand or walk around for more than fifteen minutes at a time without feeling extremely fatigued. My symptoms particularly limited my ability to work when I had to drive at night, as the combination of fatigue and nighttime driving made it difficult for me to operate my truck.As a result of my service-connected diabetes mellitus type II, I had to take metformin twice a day when I was working so I could control my condition. This also resulted in me going out of my way to try and find a rest stop so I could take a break and take my medication. I further suffered from increased and uncontrolled urinary voiding due to my diabetes, along with excessive thirst. I had to stop at least every hour whenever I was on the road to find a nearby bathroom and/or get something to drink. I also had to monitor my blood sugar when I was working. There would be times when I would get an overwhelming sense of fatigue and I would need to check my blood pressure. This forced me to stop working to check my blood pressure, and significantly interrupted my ability to complete my daily tasks.As a truck driver, my service-connected lower extremity neuropathy caused me to experience numbness in my legs all the way down to my feet. As a result of this, I often lost feeling in my legs while I was driving. I would have to stop to stretch out and take breaks as I could not be in a seated position for too long without my legs going numb. Eventually, my service-connected diabetes mellitus worsened, and I had to start taking insulin. Due to state guidelines at the time, a truck driver could not be on insulin and hold a commercial driver's license at the same time. As a result of this, I had to stop working all together. I unfortunately lack any additional training or experience beyond my training as a truck driver.My disabilities have only worsened over time. My sarcoidosis still gives me a frequent feeling of being short of breath and fatigued. As a result of my service-connected sarcoidosis, I have also developed bilateral iridocyclitis. This condition gives me unbearable pain in both of my eyes. I need to take prescription steroid eye drops four times a day to help control my condition, and even then the pain continues. When I experience a really bad flare of pain, I need to take Excedrin in addition to my eye drops because I will develop a very bad headache and the Excedrin is the only thing that will give me some kind of pain relief.Today, my diabetes mellitus type II still requires me to take insulin twice a day. I also have a restricted diet I need to follow. Due to my neuropathy, I experience extreme pain and numbness in my feet, to the point that I am very unsteady. I avoid going to places where I know there will be a lot of stairs because I don't want to risk falling down, and I also experience a lot of pain in my feet when I try to go up and downstairs. Due to all of these service-connected conditions, I do not believe I would be able to go back to work in any capacity.I hereby certify that the information I have given is true to the best of my knowledge and belief. John Doe DateCommon Mistakes in a VA Buddy LetterInconsistency—If a person's statement is inconsistent with the records, or if two statements are contradictory to one another, then it could raise credibility issues for VA. This applies to details large and small, such as the date of an in-stressor event.Downplaying or Exaggerating Symptoms—It is important not to downplay or exaggerate the veteran's symptoms, as this can also raise credibility and competency issues for VA. It could also negatively impact the veteran's claim.Forgetting to Certify the Statement or How the Layperson Has Personal Knowledge of the Veteran—As mentioned previously, the statement should be signed and dated. Additionally, it can help to expressly mention how the person writing the statement has insight into the veteran's symptoms or their military service, or how the two are related.What to Do if VA Finds Your Buddy Letter Not Credible?Potentially, a secondary lay statement may be used to replace a buddy letter that has previously been deemed uncredible. Another lay statement may be used for the purpose of offering clarification. The lay statement may be used to explain away the inconsistencies and offer some context for why the prior statements might not align with the facts on record.For example, when claiming TDIU, or total disability based on individual unemployability, VA often asks for the veteran's employment history and, if that history stretches back decades, it is understandable that the exact details would be hard to provide to VA. A lay statement can be used to explain any gaps or reasons for lack of specificity.Additionally, VA Regional Offices do not typically make credibility findings. It usually falls to the Board to parse out the particulars of competency and credibility. Oftentimes, a veteran does not necessarily know that the credibility of their statements and buddy statements are at issue until it is too late. The Board may issue a negative credibility finding without the veteran ever having had the opportunity to explain why their statements were credible, because they did not know there was a problem.Sometimes, the Board may also review the statements, and then, remand for a VA exam to consider the statements.Recent case law, Miller v. Wilkie, determines that if the Board does not make an outright negative credibility determination, then there is an implicit understanding that the statements were found credible. In this situation, if the veteran then gets a VA exam that does not consider or rejects the statements because the VA examiner does not trust that they are credible, the Board needs to call on the examiner to view the statements as credible.A VA-accredited representative may also be able to assist in a veteran's case if they have had a buddy letter deemed uncredible.Was Your VA Disability Claim Denied?The VA-accredited attorneys and advocates at Chisholm Chisholm & Kilpatrick LTD have decades of experience successfully representing disabled veterans and their families before the Department of Veterans Affairs, the Court of Appeals for Veterans Claims, and the Federal Circuit. If your VA claim was denied, we may be able to help. Contact us for a free consultation today at 800-544-9144. Robotic Process Automation Configure no-code airSlate Bots in minutes to pre-fill or extract data, integrate into a single or multiple systems of record, automate routing and decisions, or set up reminders, and notifications. Any repetitive task can be done by an existing Bot, or we can build a new one. The most powerful document generation engine with text tags, fillable fields, eSignature and roles built in, with the ability to connect to multiple data sources simultaneously without writing a single line of code. [add footer to wix page](#) Connect to a payment gateway and accept credit cards, ACH or other forms of payment. Use no-code airSlate Bots to quickly integrate payment collection into contract negotiation, quote-creation, invoicing or accounting. Automate routing, approvals, data collection, reporting and other workflows using no-code airSlate Bots. Configure and deploy them in minutes, no API, coding or complicated standards to learn.

Why Keep a Community-Based Focus in Times of Global Interactions?

Planet Business

It is a GREAT pleasure for me to give this address at the International Congress of Arctic Social Scientists. The guiding theme of this meeting, "Connections: local and global aspects of Arctic social systems", is clearly the inspiration for my title. I will start with a story.

A few years ago I was involved in a team project in Sachs Harbour in the Canadian western Arctic, the Inuit Observations of Climate Change study. The lead agency for the project was the International Institute for Sustainable Development (IISD). My role was to provide advice regarding the conduct of community-based research, especially with regard to local and traditional knowledge. Our IISD colleague who was in charge of the project planning meetings came up with a very "Western looking" workshop plan, with direct questions regarding climate change, modeling the filling of arctic tanks, and the generation of hypotheses with cause-effect linear thinking. I advised against some parts of the plan, and he did make some revisions. But the workshop was still carried out along what I thought were Western, rather than Inuit, lines of thinking and doing things.

Imagine my surprise when he came back with what looked to be a list of good workshop results and evidence of enthusiastic participation (Ford 2000). I had further surprises later when I went to Sachs Harbour myself and found out that the Inuit people of Sachs were quite comfortable in the "white man's" style of meetings. Some of them laughed at my concerns about culturally sensitive study designs and said, "our issues were "100% kind of concerns". They were no longer considered to be burning issues here, the first Mackenzie Delta - Beaufort Sea oil boom in the 1970s had transformed Sachs Harbour into an English-speaking community. I did not need a translator, they said, even with the elders.

I should qualify a few things. The Sachs Harbour experience is certainly not shared in all parts of the Canadian North. For example, in

Journal of Clinical Sleep Medicine

Use of a Chinstrap in Treating Sleep Disordered Breathing and Snoring

Robert David Vance, MD, FAASM, J. Carolyn Wren, PhD, FAASM

Department of Internal Medicine, University of Michigan Medical Center, Ann Arbor, MI

Abstract

The authors of the 2007 *Journal of Clinical Sleep Medicine* case report that presented the results of a study that included 14 moderate-severity obstructive sleep apnea (OSA) patients who were treated with a chinstrap in place revealed an obvious improvement in their polysomnographic results. No recommended further scientific investigation to ascertain if the chin strap might be beneficial (and to what patient group).

Subsequent to our case report, we received numerous comments from sleep physicians throughout the country (some physicians and even some about the potential utility of the chin strap. We learned that entrepreneurs were submitting high priced (to our minds) chin straps for treatment of snoring and OSA. In order to avoid a sizeable time reviewing emails and phone calls to state unavailability that we at Eastern Virginia Medical School Sleep Medicine did not support the use of the chin strap for the treatment of OSA, and that most investigation was warranted.

We thus updated Blum et al. for their work in investigating the potential utility of the chin strap for treatment of snoring and OSA. They demonstrated that the chin strap appears to be an ineffective treatment for a typical OSA population. We note, however, that their population did not match our case report patients, a 70-year-old male with a BMI of 34

The Road to VA Compensation Benefits

Evidence Needed to Support Direct Service Connection

When filing a claim for service-connection, you must provide the following to the VA:

- (1) evidence of your current disability;
- (2) evidence of your in-service disease, injury or event; and
- (3) a medical statement that it is "as likely as not" that your current disability is related to service ("nexus" statement).

Provide evidence of your current diagnosis through your VA or private medical records. If you receive medical care at a VA medical facility, you may obtain copies of those medical records by submitting a VA Form 10-5345 directly to the Release of Information officer at the VA medical facility.

A statement describing your current symptoms is further evidence of your condition.

The key is to provide as much detail as possible regarding (1) the severity of the symptom, (2) how often you experience the symptom, and (3) for how long a period of time you have experienced the symptom.

There's no better way to sample buddy letter for sleep apnea than with airSlate. The automation solution helps you eliminate routine and repetitive tasks.

With our service, you can focus on boosting your productivity and building a more robust business whilst exhausting paperwork is handled by our professional and progressive capabilities meant to streamline complex workflows.

These features—from pre-made workflow templates and esignature to intuitive Template designer and code-free Bots—are your primary assistants in applying document automation into your daily work. They don't require programming skills to set up or launch; they're out-of-the-box instruments developed to complete the boring jobs that burden your projects. All you need is an active airSlate account and a steady internet access. Create an airSlate Workspace. Sign up for an account and set up your first Workspace. Launch a Template. Click Create New Template and include pre-built templates to it. Assign Roles. Specify who needs to do what to properly complete the workflow. Automate the process. Select Bots and define conditions for when they have to be activated. Share the Template.

Check it out on your own or send it to teammates and make sure everything works properly. When all these steps are complete, don't forget to check your analytics widgets to pinpoint any necessary improvements and automate more. Start improving efficiency and cutting costs today! Contact Support In order to establish direct service connection for sleep apnea, a claimant must show that they have a current, diagnosis of sleep apnea, an in-service event or illness/injury, and a medical nexus or link that shows the veterans sleep apnea is related to their in-service event, injury/illness. Veterans can also prove service connection for sleep apnea by showing that their sleep apnea began in service using service medical records, or by providing a nexus opinion from a medical professional that links their current diagnosis of sleep apnea to signs or symptoms they experienced in service. A VA buddy letter, or lay statement, can be used to help support a veterans claim and provide insight into how a veterans condition affects their daily life. [doze licões sobre a história resenha](#) It should clearly describe how he or she knows the veteran and for the length of time. Then in the spouses own words, talk about the change noticed in the veteran. [neopost is 200 series not printing](#) These changes should include at least some of the symptoms of sleep apnea. Trust me your spouse will enjoy discussing how your snoring affects them! To confirm a sleep apnea diagnosis for VA disability compensation purposes, VA requires that a sleep study be conducted. If you have previously been diagnosed with sleep apnea, but have not undergone a sleep study, VA will not consider that diagnosis enough evidence to verify eligibility for compensation. Here are some tips for writing a buddy letter:Keep it short. Remember that the person processing the claim has to read through a lot of information. ... Include contact information.

... Include a closing statement. ... [millyz blanco 3 zip](#) Use the VA Form. ... Dont spoon-feed the author. Personal Statement: You can explain using specific stories about 1 what happened that caused your OSA or worsened the symptoms and 2 how the symptoms began or changed during your time in service. [wefuzezewepawusubewi.pdf](#) Here are some tips to help you write the letter:Be clear about your relationship with the veteran. In the first section of the buddy letter, state your name and how you know the veteran. [kakeho pdf gratuil](#) ... Include as many details as possible. ... Include only the information you know. ... Remember to sign and date the letter. If sleep apnea causes disordered breathing but no other symptoms, the veteran will be assigned a 0 percent rating, meaning the veteran will not receive any monthly payment amount for sleep apnea. If the veteran experiences persistent excessive sleepiness during the day, he or she will receive a 30 percent rating. The VA repeatedly denies these claims without fully considering the medical significance of sleep apnea and its physical effects on the body. As many as 38 of all claims are denied in error, due in part to a weak initial application that lacks medical evidence or doesnt clearly demonstrate service connection. Sleep Apnea Buddy Letter Example Va Spouse Letter Example for Sleep Apnea Buddy Letter for Sleep Apnea
