

Hydraulic Hose Routing Guidelines

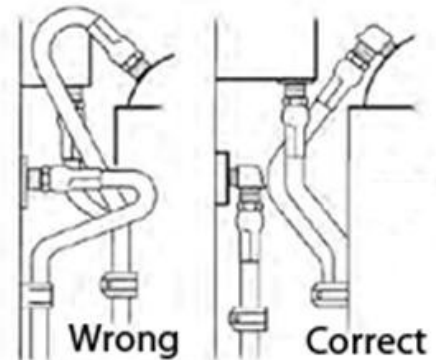

1. Avoid twisting hydraulic line when tightening fittings.

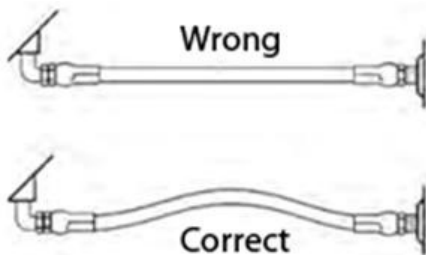

2. Do not bend hose too tight, keep a nice flowing shape.

3. Use elbow fittings where required.

4. Prevent hydraulic line from being stretched to tight, must have slack!

6. Protect hydraulic lines from damage, keep away from heat and moving parts (exhaust, suspension, driveshaft, etc.) and from sharp edges that could cut/damage the line when making contact while operating or driving.
