LAZARUS INITIATIVE

AT-HOME COVID-19 TESTING KIT

GOLD STANDARD TESTING. 24-HOUR RESULTS.

Until now, COVID-19 testing in the United States has been sporadic, slow and unreliable. The few testing sites available are difficult to access, often have mile-long car lines, and results take days or weeks to arrive. This is unacceptable for a US-based pandemic response program.

To address these shortcomings, Discovery Genomics and Trax Management Services have joined forces to create the Lazarus Initiative – a quick, accurate, and comprehensive COVID-19 testing program for government entities, employers and individuals. This Initiative uses high-quality, rapid PCR testing to deliver results within 24-48 hours, all from a self-contained test kit delivered directly to one's doorstep.

HOW IT WORKS

Leveraging our CLIA-certified lab and best-in-class PCR test assays (FDA EUA, CE), the Lazarus Initiative delivers fully contained test kits in bulk to individuals, employers, factories, churches, and school districts, as well as many other government agencies and private sector entities. The individual will then follow the steps below:

1 Register the test kit through an easy-to-follow online platform.

2 Collect a test sample using an enclosed nasal swab.

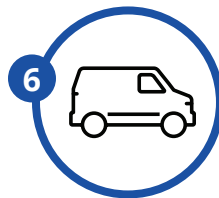

3 Insert the used nasal swab into the enclosed collection tube.

4 Place the collection tube into the enclosed biohazard bag and seal it.

5 Place the sealed biohazard bag into the enclosed transport box. Place the box into the prepaid FedEx overnight shipping mailer.

6 Drop the mailer off at a FedEx dropbox.

7 Access test results at mychart.cchealth.com within 24-48 hours.

WITH AN EASE AND SIMPLICITY UNMATCHED IN THE MARKET, THE LAZARUS INITIATIVE IMMEDIATELY IDENTIFIES AND ISOLATES NEW CASES – ALLOWING BUSINESSES TO REMAIN OPEN AND PEOPLE TO REMAIN SAFE.

ABOUT US

DISCOVERY GENOMICS

Discovery Genomics improves patient outcomes and advances research through technology-enabled molecular science and data analytics with Ai. With opt-in DNA testing and Ai analysis of symptoms and treatments, we provide personalized healthcare recommendations to patients. We focus on Pharmacogenomics (PGx), Whole Genome Sequencing (WGS) and Cancer Tissue genomic research to align therapies. In 2020, DG retooled our innovative genomics lab to include COVID testing and research.

TRAX MANAGEMENT SERVICES

With expertise in pharmaceuticals, medical PPE, and a myriad of other inaccessible products, Trax Management Services is often the company to call when the need is urgent and supply acquisition is challenging. A federally-registered Service Disabled Veteran-Owned Small Business (SDVOSB), Trax obtained the FDA Emergency Use Authorization for the PCR test kit that forms the “guts” of the Lazarus Initiative testing solution.
