

## Better Harvest Farms Basil Plant Care, Translating, and Harvest

*This handout is intended to educate and guide. Follow these growing tips, and you'll always have a wonderful crop!*

- Keep the plant in a sunny window
- Water every other day until the plant is 3-5 inches tall
- Carefully transplant into a bigger pot of your choice with the soil of your choice
- Water well
  - watering will depend on soil and pot size
  - top of the soil can be dry, but 1-2 inches below must be moist
- Harvest individual leaves as needed.
  - The best place to harvest leaves is where the stem Ys
- If seed heads develop, clip them off and your plant will continue to grow for a long time. If you leave the seed head, the plant will become woody and is not good to eat.
