A glass partition is a sleek and modern type of door without visible frames or borders surrounding the glass pane. We use specialized hardware and hinges to attach the glass directly to the structure. We make these doors from strong and safe tempered glass. They offer several benefits: a minimalist and elegant appearance, unobstructed views, easy maintenance, and versatility for various spaces like offices, showers, and patio entrances. Frameless glass doors add sophistication and contemporary style, allowing the beauty of the surroundings to stand out.

## 5. Glass Partition

Curtain walls and structural glazing are building facade systems used in modern architecture. Curtain walls are non-load bearing panels attached to the building's frame, offering protection and aesthetics. They withstand environmental forces and allow natural light inside. Structural glazing, on the other hand, directly bonds glass panels to the building's frame, providing support without visible frames. It offers high transparency and creates a contemporary architectural design. In summary, curtain walls are lightweight and decorative, while structural glazing combines support and a seamless appearance, both contributing to modern architectural designs.

A glass canopy is an overhead covering made of glass, commonly used to shelter and protect building entrances, walkways, and outdoor areas from the elements. It allows natural light while shielding from rain, snow, and sunlight.

Key features:

Transparency: Clear view and natural light.

Weather Protection: Keeps areas dry and comfortable.

Architectural Appeal: Adds modern elegance to spaces.

Durability: Strong and safe with tempered glass.

Versatility: **Customizable for different styles.**

Functionality: Reduces the need for artificial lighting.
