

As the weather is beginning to warm up, we thought you could use this opportunity to begin exploring plants as part of our upcoming Science topic. Below are some ideas you could do at home.

Can you label a flower with the names of the different parts (petal, stem, root, leaf etc)

When you go on a walk, why not name and count as many different types of flowers as you can?

Are there any you haven't seen before?

Science Plants

Plant some seeds and watch them grow. Keep a plant diary describing what you can see and how the plant changes.

Use your sketching skills to do some observational drawings of some plants and flowers in the garden.

Do some crayon/chalk rubbings of different leaves, bark, flowers etc that you find in your garden or on a walk.
