

# Pressure Relief Valve Replacement

Why Replace the

## Pressure Relief Valve

This valve is the safety component on all propane tanks that automatically releases any excess pressure that could build up in the tank. This valve may never need to release pressure, but in the case of an emergency it is important that it is in good working condition.

Must be replaced every 25 years.

Tank must be empty to replace the valve.

We will replace the valve within 24 hours of your call.

### If You Own a Horizontal Tank

Valve replacement costs range from \$150.00 to \$375.00 depending on your tank size and existing valves.

### If you are renting a Feeg's Tank

There is no cost, and we will be scheduling valve or tank replacements when routine maintenance is due.

### 120 Gal (400 lb) "Pig" Tanks

DOT tanks need recertifying every 10 years. ASME tanks need the pressure relief valve replaced every 25 years. Contact us for more details if you have this size of tank.
