NEXT STEPS

Contact HATS Consulting to discuss how we can assist you with providing technical advisory services or training for your facilities and operations

HOLISTIC APPROACH

Water and tailings storage does not live in isolation to the rest of your operations and neither should the studies used to make decisions about them.

Our studies and designs are founded on a fundamental understanding of your overall operational context so that the outcomes and recommendations of our work are practical, realistic and aligns with your operations.

From tailings throughputs to mined pit availability and processing technologies to mine plans, our studies consider it all from the start.

BUSINESS OBJECTIVES AND GOALS

The outcome and recommended way forward and decisions resulting from storage facility studies should accomplish responsible and safe storage that aligns with your business objectives and goals.

By adopting a holistic approach which considers the wider project context your project, operational and overall business objectives and goals are automatically included as a underlying criteria and factor in our studies and design.

EXPERIENCED DELIVERY

HATS has delivered a variety of studies across the world for operations ranging in size, objectives and stages. We bring this experience to every study and design we deliver to you.

The basis of each study we deliver is a fundamental understanding of engineering principles to provide a technically robust outcome.

OUR SERVICE

HATS aims to maximise value to our clients through integrity, honesty and delivery on our commitments.

We work with you to deliver studies and designs that produce outcomes that considers all pertinent aspects of your project and that to provide you with a way forward with your storage facilities that adds value to your project.

Our innovative collapsible delivery reports allow you to provide as much detail and background to our work as is required. This allow the intended reader of our reports to access as much or as little detail as is appropriate at the touch of a button.
