**Water Features**  
Project Examples

 **ClifRock**  
Outdoor Living Made Simple™

**Engineered Boulder Construction** is the modern method for building pool water features and grottos. Rock face Panels made from fiber reinforced, high performance, polymeric concrete are used to hand craft rock and boulder formations. This high strength material allows for steel reinforced, hollow core features which drastically reduce weight and stress on pool structure.

**Pool Waterfall**  
25' Tall Pool  
Water Feature  
with Built-in  
Slide and 8'H x  
3.5'W Walking  
Cave through  
center.

**Tree Trunk Slide** a signature enclosed water slide custom designed and built by ClifRock Installers using high performance concrete mix.

**Lazy River and Bridge** are a great way to create a unique pool experience. Bridge, coping and surrounding boulder features were all made with engineered boulder panels and fiber reinforced, high performance, polymeric concrete.
