

## **ECITB Estimating Methodology and Practice** **From People Working in Project Management, Project Engineering,** **Estimating, PMO and Project Controls.**

**Feedback from delegates who have attended GO FORTH virtual delivery of the ECITB Estimating Methodology and Practice shows how this provided them with a deeper insight to help them in their role in the future.**

**Project Director**

*Good discussion and very good pace for the course.*

**Lead Project Engineer/Project Manager**

*Overall experience was good. There were several bits I've taken away to implement into our systems here. Helpful that the course was 5 hours per day allowing time either side to keep up with some work tasks. Being online, time was more efficiently utilised, i.e. no need for travel.*

**Project Engineer**

*I thought the course went really well and I can see how it would be helpful for the future. Worked well having someone on the course from the customers point of view. No technical issues, worked well on Microsoft Teams.*

**Project Support Officer**

*I enjoyed the course and over time I will use the material. Examples of how the formulas work was ideal for me to have a better understanding.*

**Estimator 1**

*A lot of knowledge gained from the course, Shane kept it very interesting and flowing well. The break out rooms were very enjoyable. Completing activities set by Shane with different people and different careers was very interesting.*

**Estimator 2**

*Provided me with good information that helps with estimating on a broader scale and provided deeper insight into the role of an estimator.*

**Estimator 3**

*I enjoyed being able to discuss the content with the trainer and the group as the course progressed. If I didn't understand something, it was clarified very well.*

**Project Controls Assistant**

*I enjoyed having conversations with others from different industries. Different experience levels etc. made for more interesting discussions.*
