

# Math Curators

Today's gallery:  
4-digit by 2-digit  
multiplication

You'll be designing a colorful, artistic poster illustrating how to solve 4-digit by 2-digit multiplication problems.

Use colors, paint, charcoal, shading, or anything else you think would make your poster really shine! Remember, this isn't a math problem you're showing off, rather an art piece suited for a world class art exhibit!

Include arrows, signs, or key words that show how you've solved your 4-digit by 2-digit multiplication problem.

Once you're done include a separate small piece of paper to describe the artwork and the steps you used to solve the problem.

Lastly, walk around the room and enjoy your classmates' art. Take note of their designs, art, and how they solved their multiplication problems.
