

Resolution on Base Load Power Generation in Wyoming

Whereas Wyoming produces four of the cleanest sources of power generation in the United States: coal, natural gas, uranium, and hydroelectric.

Whereas Wyoming has the ability to provide these resources to the rest of the USA and the world.

Be it resolved, the Lincoln County Republican Party calls on the 68th Wyoming State Legislature to demand that Governor Gordon oppose future promotion and subsidization of commercial wind and solar generation of electricity in the state of Wyoming, and concentrate on providing Wyoming's stable base load energy for all Wyoming's Citizens and to promote exporting Wyoming's stable base load power sources to the rest of the USA and the world.
